Mac OS X 10.6 Snow Leopard Installation and Setup Guide

Read this document before you install Mac OS X. It includes important information about installing Mac OS X.

For more information about Mac OS X, visit this website:

- www.apple.com/macosx

For the latest information about using Mac OS X, connect to the Internet and open Mac Help. To open Mac Help, in the Finder choose Help > Mac Help.

For additional support and technical information on all Apple products, visit this website:

- www.apple.com/support

To find out what version of Mac OS X you have installed on your computer, choose Apple () menu > About This Mac.

System requirements

To upgrade to Snow Leopard or install Snow Leopard for the first time, you must have a Mac with:

- An Intel processor
- An internal or external DVD drive, or DVD or CD Sharing
- At least 1 GB of RAM (additional RAM is recommended)
- A built-in display or a display connected to an Apple-supplied video card supported by your computer
- At least 5 GB of disk space available, or 7 GB of disk space if you install the developer tools

Use Startup Disk preferences to select the disc as your startup disk, and then restart. If the Installer doesn't open when you're using DVD or CD Sharing, try using Remote Install Mac OS X. If your computer is connected to a network, your network administrator may prevent you from installing software or upgrading Mac OS X.

2 Remove any cards from manufacturers other than Apple. 3 Try installing Mac OS X again. If you're still unable to install Mac OS X, try erasing the disk before installing Mac OS X. Before you erase your disk, try copying your files to an external disk. When you're ready to erase and reinstall Mac OS X, follow the instructions in the "Restoring your computer to factory settings" section of this document.

Advice about accounts and passwords In the following sections, you'll find answers to questions you may have about user names, passwords, and logging in.

You can't log in to your computer Make sure you're typing the name and password exactly the way they were created, including capitalization. If you still can't log in but you know the name and password of an administrator user (such as the first user you created), log in as the administrator and use Accounts preferences to change your password. You don't remember your password and need to reset it If you don't remember your password and you have the Mac OS X installation disc, insert the disc and restart your computer while holding down the C key. If your computer doesn't have an optical drive, use Remote Install Mac OS X. When the M.
