..... A-41 4 Notebook PC User Manual Chapter 1: Introducing the Notebook PC 1 About This User's Manual You are reading the Notebook PC User's Manual. This User's Manual provides information regarding the various components in the Notebook PC and how to use them.

The following are major sections of this User's Manual: 1. 2. 3. 4. 5.

Introducing the Notebook PC Introduces you to the Notebook PC and this User's Manual. *Knowing the Parts* Gives you information on the Notebook PC's components. *Getting Started* Gives you information on getting started with the Notebook PC. *Using the Notebook PC* Gives you information on using the Notebook PC's components. *Appendix* Introduces you to optional accessories and gives additional information.

The actual bundled operating system and applications differ by models and territories. There may be differences between your Notebook PC and the pictures shown in this manual. Please accept your Notebook PC as being correct. Notes for This Manual A few notes and warnings are used throughout this guide, allowing you to complete certain tasks safely and effectively. These notes have different degrees of importance as follows: **WARNING!** Important information that must be followed for safe operation. **IMPORTANT!** Vital information that must be followed to prevent damage to data, components, or persons. **TIP:** Tips for completing tasks. **NOTE:** Information for special situations. 6 Notebook PC User Manual Safety Precautions The following safety precautions will increase the life of the Notebook PC. Follow all precautions and instructions.

Except as described in this manual, refer all servicing to qualified personnel. Disconnect the AC power and remove the battery pack(s) before cleaning. Wipe the Notebook PC using a clean cellulose sponge or chamois cloth dampened with a solution of nonabrasive detergent and a few drops of warm water and remove any extra moisture with a dry cloth. **DO NOT** place on uneven or unstable work surfaces. Seek servicing if the casing has been damaged. **DO NOT** expose to dirty or dusty environments. **DO NOT** operate during a gas leak. **DO NOT** press or touch the display panel. Do not place together with small items that may scratch or enter the Notebook PC. **DO NOT** leave the Notebook PC on your lap or any part of the body to prevent discomfort or injury from heat exposure.

DO NOT place or drop objects on top and do not shove any foreign objects into the Notebook PC. **DO NOT** expose to strong magnetic or electrical fields. **DO NOT** expose to or use near liquids, rain, or moisture. **DO NOT** use the modem during electrical storms. Battery safety warning: **DO NOT** throw the battery in fire.

DO NOT short circuit the contacts. **DO NOT** disassemble the battery. Notebook PC User Manual 7 **SAFE TEMP:** This Notebook PC should only be used in environments with ambient temperatures between 5°C (41°F) and 35°C (95°F). **DO NOT** carry or cover a Notebook PC that is powered ON with any materials that will reduce air circulation such as a carrying bag. **DO NOT** use damaged power cords, accessories, or other peripherals.

INPUT RATING: Refer to the rating label on the bottom of the Notebook PC and be sure that your power adapter complies with the rating. **DO NOT** use strong solvents such as thinners, benzene, or other chemicals on or near the surface. Incorrect installation of battery may cause explosion and damage the Notebook PC. **DO NOT** throw the Notebook PC in municipal waste. This product has been designed to enable proper reuse of parts and recycling. The symbol of the crossed out wheeled bin indicates that the product (electrical, electronic equipment and mercury-containing button cell battery) should not be placed in municipal waste. Check local regulations for disposal of electronic products. **DO NOT** throw the battery in municipal waste. The symbol of the crossed out wheeled bin indicates that the battery should not be placed in municipal waste. 8 Notebook PC User Manual Sound Pressure warning Excessive sound pressure from earphones or headphones can cause hearing damage or loss.

Adjustment of the volume control as well as the equalizer to settings other than the center position may increase the earphones or headphones output volume. **Power Switch** The power switch allows powering ON and OFF the Notebook PC and recovering from suspend mode. Use the switch once to turn ON and once to turn OFF the Notebook PC. The power switch only works when the display panel is opened. **Keyboard** The keyboard provides full-sized keys with comfortable travel (depth at which the keys can be depressed) and palm rest for both hands. **Two Windows function keys** are provided to help ease navigation in the Windows operating system. 2 3 4 5 6 Notebook PC User Manual 15 7 **Touchpad** The touchpad is a pointing device that provides the same functions as a desktop mouse. A software-controlled scrolling function is available after setting up the included touchpad utility to allow easy Windows or web navigation.

Status Indicators (front) Status indicators represent various hardware/software conditions. See indicator details in Chapter 3. 8 16 Notebook PC User Manual Bottom Side · · The bottom side may vary in appearance depending on model.

The battery pack size varies depending on model. **Intel AMD 5 5 WARNING!** The bottom of the Notebook PC can get very hot. Be careful when handling the Notebook PC while it is in operation or recently been in operation. High temperatures are normal during charging or operation. **DO NOT USE ON SOFT SURFACES SUCH AS BEDS OR SOFAS WHICH MAY BLOCK THE VENTS.**

DO NOT PUT THE NOTEBOOK PC ON YOUR LAP OR OTHER PARTS OF THE BODY TO AVOID INJURY FROM THE HEAT. Notebook PC User Manual 17 1 **Battery Lock - Spring** The spring battery lock is used to keep the battery pack secured. When the battery pack is inserted, it will automatically lock. To remove the battery pack, this spring lock must be held in the unlocked position.

2 Battery Pack The battery pack is automatically charged when the Notebook PC is connected to an AC power source and maintains power to the Notebook PC when AC power is not connected.

This allows use when moving temporarily between locations. Battery time varies by usage and by the specifications for this Notebook PC. The battery pack cannot be disassembled and must be purchased as a single unit. **3 Battery Lock - Manual** The manual battery lock is used to keep the battery pack secured. Move the manual lock to the unlocked position to insert or remove the battery pack. Move the manual lock to the locked position after inserting the battery pack. **4 Memory (RAM) Compartment** The memory compartment provides expansion capabilities for additional memory. Additional memory will increase application performance by decreasing hard disk access. The BIOS automatically detects the amount of memory in the system and configures CMOS accordingly during the POST (Power-On-Self-Test) process. There is no hardware or software (including BIOS) setup required after the memory is installed.

@@ 18 Notebook PC User Manual 5 Hard Disk Drive Compartment The hard disk drive is secured in a compartment. Visit an authorized service center or retailer for information on hard disk drive upgrades for your Notebook PC. Only purchase hard disk drives from authorized retailers of this Notebook PC to ensure maximum compatibility and reliability. **Notebook PC User Manual 19 Right Side Intel Series 1 2 3 4 5 6 7 AMD Series 1 2 3 4 5 6 7 1 Headphone Output Jack** The stereo headphone jack (1/8 inch) is used to connect the Notebook PC's audio out signal to amplified speakers or headphones. Using this jack automatically disables the built-in speakers. **Microphone Input Jack** The mono microphone jack (1/8 inch) can be used to connect an external microphone or output signals from audio devices. Using this jack automatically disables the built-in microphone. Use this feature for video conferencing, voice narrations, or simple audio recordings. **2 20 Notebook PC User Manual 3 USB Port (2.0)** The USB (Universal Serial Bus) port is compatible with USB 2.0 or USB 1.1 devices such as keyboards, pointing devices, cameras, hard disk drives, printers, and scanners connected in a series up to 12Mbps/sec (USB 1.1) and 480Mbps/sec (USB 2.0). USB allows many devices to run simultaneously on a single computer, with some peripherals acting as additional plug-in sites or hubs.

USB supports hot-swapping of devices so that most peripherals can be connected or disconnected without restarting the computer. **4 Optical Drive** The Notebook PC comes in various models with different optical drives. The Notebook PC's optical drive may support compact discs (CD) and/or digital video discs (DVD) and may have recordable (R) or re-writable (RW) capabilities. See the marketing specifications for details on each model. **5 Optical Drive Electronic Eject** The optical drive eject has an electronic eject button for opening the tray. You can also eject the optical drive tray through any software player or by right clicking the optical drive in Windows "Computer" and selecting Eject. **6 Optical Drive Emergency Eject** (location varies by model) The emergency eject is used to eject the optical drive tray in case the electronic eject does not work. Do not use the emergency eject in place of the electronic eject. **Notebook PC User Manual 21 7 Kensington® Lock Port (Intel Series)** The Kensington® lock port allows the Notebook PC to be secured using Kensington® compatible Notebook PC security products. These security products usually include a metal cable and lock that prevent the Notebook PC to be removed from a fixed object. Purchased separately in order to use memory cards from devices such as digital cameras, MP3 players, mobile phones, and PDAs. This Notebook PC has a built-in high-speed memory card reader that can conveniently read from and write to many flash memory cards. **26 Notebook PC User Manual Chapter 3: Getting Started 3 Power System Using AC Power** The Notebook PC power is comprised of two parts, the power adapter and the battery power system. The power adapter converts AC power from a wall outlet to the DC power required by the Notebook PC. Your Notebook PC comes with a universal AC-DC adapter.

That means that you may connect the power cord to any 100V-120V as well as 220V-240V outlets without setting switches or using power converters. Different countries may require that an adapter be used to connect the provided US-standard AC power cord to a different standard. Most hotels will provide universal outlets to support different power cords as well as voltages. It is always best to ask an experienced traveler about AC outlet voltages when bringing power adapters to another country. **3 1 2 110V -220 V** The actual location of the power input differs by models. Refer to the previous chapter to locate the LAN port. You can buy travel kits for the Notebook PC that includes power and modem adapters for almost every country. **WARNING! DO NOT** connect the AC power cord to an AC outlet prior to connecting the DC plug to the Notebook PC. Doing so may damage the AC-DC adapter. **Notebook PC User Manual 29 IMPORTANT!** Damage may occur if you use a different adapter to power the Notebook PC or use the Notebook PC's adapter to power other electrical devices.

If there is smoke, burning scent, or extreme heat coming from the AC-DC adapter, seek servicing. Seek servicing if you suspect a faulty AC-DC adapter. You may damage both your battery pack(s) and the Notebook PC with a faulty AC-DC adapter. This Notebook PC may come with either a two or three-prong plug depending on territory. If a three-prong plug is provided, you must use a grounded AC outlet or use a properly grounded adapter to ensure safe operation of the Notebook PC.

WARNING! THE POWER ADAPTER MAY BECOME WARM TO HOT WHEN IN USE. BE SURE NOT TO COVER THE ADAPTER AND KEEP IT AWAY FROM YOUR BODY. Unplug the power adapter or switch off the AC outlet to minimize the power consumption when the Notebook PC is not in use. **30 Notebook PC User Manual Using Battery Power** The Notebook PC is designed to work with a removable battery pack. The battery pack consists of a set of battery cells housed together.

A fully charged pack will provide several hours of battery life, which can be further extended by using power management features through the BIOS setup. Additional battery packs are optional and can be purchased separately through a Notebook PC retailer. **Installing and Removing the Battery Pack** Your Notebook PC may or may not have its battery pack installed. If your Notebook PC does not have its battery pack installed, use the following procedures to install the battery pack. **1 IMPORTANT!** Never attempt to remove the battery pack while **3** the Notebook PC is turned ON, as this may result in the loss of working data.

[You're reading an excerpt. Click here to read official ASUS K55A user guide](http://yourpdfguides.com/dref/4283046)

To install the battery pack: 3 1 2 Notebook PC User Manual 31 To remove the battery pack: 2 1 3 **IMPORTANT!** Only use battery packs and power adapters supplied with this Notebook PC or specifically approved by the manufacturer or retailer for use with this model or else damage may occur to 3 Notebook PC. the Battery Care 1 2 The Notebook PC's battery pack, like all rechargeable batteries, has a limit on the number times it can be recharged. The battery pack's useful life will depend on your environment temperature, humidity, and how your Notebook PC is used. It is ideal that the battery be used in a temperature range between 10°C and 35°C (50°F and 95°F). You must also take into account that the Notebook PC's internal temperature is higher than the outside temperature.

Any temperatures above or below this range will shorten the life of the battery. But in any case, the battery pack's usage time will eventually decrease and a new battery pack must be purchased from an authorized dealer for this Notebook PC. Because batteries also have a shelf life, it is not recommended to buy extras for storing. **WARNING!** For safety reasons, **DO NOT** throw the battery in fire, **DO NOT** short circuit the contacts, and **DO NOT** disassemble the battery. If there is any abnormal operation or damage to the battery pack caused by impact, turn **OFF** the Notebook PC and contact an authorized service center. 32 Notebook PC User Manual Powering ON the Notebook PC The Notebook PC's power-ON message appears on the screen when you turn it ON. If necessary, you may adjust the brightness by using the hot keys. If you need to run the BIOS Setup to set or modify the system configuration, press [F2] upon bootup to enter the BIOS Setup. Press [ESC] and you will be presented with a boot menu with selections to boot from your available drives. Before bootup, the display panel flashes when the power is turned ON.

This is part of the Notebook PC's test routine and is not a problem with the display. **IMPORTANT!** To protect the hard disk drive, always wait at least 5 seconds after turning **OFF** your Notebook PC before turning it back ON. **WARNING!** **DO NOT** carry or cover a Notebook PC that is powered ON with any materials that will reduce air circulation such as a carrying bag. The Power-On Self Test (POST) When you turn ON the Notebook PC, it will first run through a series of software-controlled diagnostic tests called the Power-On Self Test (POST). The software that controls the POST is installed as a permanent part of the Notebook PC's architecture.

The POST includes a record of the Notebook PC's hardware configuration, which is used to make a diagnostic check of the system. This record is created by using the BIOS Setup program. If the POST discovers a difference between the record and the existing hardware, it will display a message on the screen prompting you to correct the conflict by running BIOS Setup. In most cases the record should be correct when you receive the Notebook PC. When the test is finished, you may get a message reporting "No operating system found" if the hard disk was not preloaded with an operating system.

This indicates that the hard disk is correctly detected and ready for the installation of a new operating system. Notebook PC User Manual 33 Self Monitoring and Reporting Technology The S.M.A.R.T. (Self Monitoring and Reporting Technology) checks the hard disk drive during POST and gives a warning message if the hard disk drive requires servicing. If any critical hard disk drive warning is given during bootup, backup your data immediately and run Windows disk checking program. To run Windows' disk checking program: click Windows > select Computer > right-click a hard disk drive icon > choose Properties > click the Tools tab > click Check Now > click Start. You can also select "Scan .

.. sectors" for more effective scan and repair but the process will run slower. **IMPORTANT!** If warnings are still given during bootup after running a software disk checking utility, you should take your Notebook PC in for servicing. Continued use may result in data loss. 34 Notebook PC User Manual Checking Battery Power The battery system implements the Smart Battery standard under the Windows environment, which allows the battery to accurately report the amount of charge left in the battery. A fully-charged battery pack provides the Notebook PC a few hours of working power. But the actual figure varies depending on how you use the power saving features, your general work habits, the CPU, system memory size, and the size of the display panel. Screen captures shown here are examples only and may not reflect what you see in your system. You will be warned when battery power is low.

If you continue to ignore the low battery warnings, the Notebook PC eventually enters suspend mode (Windows default uses STR). Right-click the battery icon Pointer over the battery icon without power adapter. Left-click the battery icon Pointer over the battery icon with power adapter. **WARNING!** Suspend-to-RAM (STR) does not last long when the battery power is depleted. STR is not the same as power OFF.

STR requires a small amount of power and will fail and lose data if no power is available due to complete battery depletion or no power supply (e.g. removing both the power adapter and battery pack). Notebook PC User Manual 35 Charging the Battery Pack Before you use your Notebook PC on the road, you will have to charge the battery pack. The battery pack begins to charge as soon as the Notebook PC is connected to external power using the power adapter.

Fully charge the battery pack before using it for the first time. A new battery pack must completely charge before the Notebook PC is disconnected from external power. It takes a few hours to fully charge the battery when the Notebook PC is turned OFF and may take twice the time when the Notebook PC is turned ON. The battery status indicator on the Notebook PC turns OFF when the battery pack is charged. The battery starts charging when the charge remaining in the battery drops below 95%. This prevents the battery from charging frequently. Minimizing the recharge cycles helps prolong battery life. The battery stops charging if the temperature is too high or the battery voltage is too high. **WARNING!** **DO NOT** leave the battery pack discharged. The battery pack will discharge over time.

If not using a battery pack, it must continued to be charged every three months to extend recovery capacity or else it may fail to charge in the future. 36 Notebook PC User Manual Power Options The power switch turns ON and OFF the Notebook PC or putting the Notebook PC into sleep or hibernation modes. Actual behavior of the power switch can be customized in Windows Control Panel "Power Options." For other options, such as "Switch User, Restart, Sleep, or Shut Down," click the arrowhead next to the lock icon.

Restarting or Rebooting After making changes to your operating system, you may be prompted to restart the system. Some installation processes will provide a dialog box to allow restart. To restart the system manually, choose Restart. **IMPORTANT!** To protect the hard drive, wait at least 5 seconds after turning OFF your Notebook PC before turning it back ON. Notebook PC User Manual 37 Emergency Shutdown In case your operating system cannot properly turn OFF or restart, there is an additional way to shutdown your Notebook PC: Hold the power button seconds. **over 4 IMPORTANT! DO NOT** use emergency shutdown while data is being written; doing so can result in loss or destruction of your data.

38 Notebook PC User Manual Power Management Modes The Notebook PC has a number of automatic or adjustable power saving features that you can use to maximize battery life and lower Total Cost of Ownership (TCO). You can control some of these features through the Power menu in the BIOS Setup. ACPI power management settings are made through the operating system. The power management features are designed to save as much electricity as possible by putting components into a low power consumption mode as often as possible but also allow full operation on demand. Sleep and Hibernate Power management settings can be found in the Windows > Control Panel > Hardware and Sound > Power Options.

In Power Options, you can define Sleep/Hibernate or Shut Down for closing the display panel or pressing the power button. Sleep and Hibernate saves power when your Notebook PC is not in use by turning OFF certain components. When you resume your work, your last status (such as a document scrolled down half way or email typed half way) will reappear as if you never left. Shut Down will close all applications and ask if you want to save your work if any are not saved. Notebook PC User Manual 39 Sleep is the same as Suspend-to-RAM (STR).

This function stores your current data and status in RAM while many components are turned OFF. Because RAM is volatile, it requires power to keep (refresh) the data. Click the Windows button and the arrowhead next to the lock icon to see this option. You can also use the keyboard shortcut [Fn F1] to activate this mode. Recover by pressing any keyboard key except [Fn]. (NOTE: The power indicator will blink in this mode.) Hibernate is the same as Suspend-to-Disk (STD) and stores your current data and status on the hard disk drive. By doing this, RAM does not have to be periodically refreshed and power consumption is greatly reduced but not completely eliminated because certain wake-up components like LAN needs to remain powered. Hibernate saves more power compared to Sleep. Click the Windows button and the arrowhead next to the lock icon to see this option.

Recover by pressing the power button. (NOTE: The power indicator will be OFF in this mode.) 40 Notebook PC User Manual Thermal Power Control There are three power control methods for controlling the Notebook PC's thermal state. These power control cannot be configured by the user and should be known in case the Notebook PC should enter these states. The following temperatures represent the chassis temperature (not CPU).

The fan turns ON for active cooling when the temperature reaches the safe upper limit. The CPU decreases speed for passive cooling when the temperature exceeds the safe upper limit. The system shuts down for critical cooling when temperature exceeds the maximum safe upper limit. Notebook PC User Manual 41 Special Keyboard Functions Colored Hot Keys The following defines the colored hot keys on the Notebook PC's keyboard. The colored commands can only be accessed by first pressing and holding the function key while pressing a key with a colored command.

The Hot Key locations on the function keys may vary depending on model but the functions should remain the same. Follow the icons instead of the function keys. "ZZ" Icon (F1): Places the Notebook PC in suspend mode (either Save-to-RAM or Save-to-Disk depending on sleep button setting in power management setup). Radio Tower (F2): Wireless Models Only: Toggles the internal wireless LAN or Bluetooth (on selected models) ON or OFF with an on-screen-display. When enabled, the corresponding wireless indicator will light.

Windows software settings are necessary to use the wireless LAN or Bluetooth. Sun Down Icon (F5): Decreases the display brightness Sun Up Icon (F6): Increases the display brightness LCD Icon (F7): Toggles the display panel ON and OFF. (On certain models; stretches the screen area to fill the entire display when using low resolution modes.) 42 Notebook PC User Manual LCD/Monitor Icons (F8): Toggles between the Notebook PC's LCD display and an external monitor in this series: LCD Only -> CRT Only (External Monitor) -> LCD + CRT Clone -> LCD + CRT Extend. (This function does not work in 256 Colors, select High Color in Display Property Settings.

) NOTE: Must connect an external monitor "before" booting up. Crossed-out Touchpad (F9): Toggles the built-in touchpad LOCKED (disabled) and UNLOCKED (enabled). Locking the touchpad will prevent you from accidentally moving the pointer while typing and is best used with an external pointing device such as a mouse. NOTE: Selected models have an indicator between the touchpad buttons will light when the touchpad is UNLOCKED (enabled) and not light when the touchpad is LOCKED (disabled). Crossed Speaker Icons (F10): Toggles the speakers ON and OFF (only in Windows OS) Speaker Down Icon (F11): Decreases the speaker volume (only in Windows OS) Speaker Up Icon (F12): Increases the speaker volume (only in Windows OS) Fn+C: Toggles "Splendid Video Intelligent Technology" function ON and OFF. This allows switching between different display color enhancement modes in order to improve contrast, brightness, skin tone, and color saturation for red, green, and blue independently. You can see the current mode through the onscreen display (OSD). Fn+V: Toggles "Life Frame" software application. Notebook PC User Manual 43 Power4Gear Hybrid (Fn+Space Bar): This key toggles power savings between various power saving modes. The power saving modes control many aspects of the Notebook PC to maximize performance versus battery time.

Applying or removing the power adapter will automatically switch the system between AC mode and battery mode. You can see the current mode through the on-screen display (OSD). Microsoft Windows Keys There are two special Windows keys on the keyboard as described below. The key with the Windows Logo activates the Start menu located at the bottom left of the Windows desktop. The other key, that looks like a Windows menu with a small pointer, activates the properties menu and is equivalent to pressing the right mouse button on a Windows object. 44 Notebook PC User Manual Keyboard as a Numeric Keypad The numeric keypad is embedded in the keyboard and consists of 15 keys that make number intensive input more convenient.

These dual-purpose keys are labeled in orange on the key caps. Numeric assignments are located at the upper right hand corner of each key as shown in the figure. When the numeric keypad is engaged by pressing [Fn][Ins/Num LK], the number lock LED lights up. If an external keyboard is connected, pressing the [Ins/Num LK] on the external keyboard enables/disables the NumLock on both keyboards simultaneously.

To disable the numeric keypad while keeping the keypad on an external keyboard activated, press the [Fn][Ins/Num LK] keys on the Notebook PC. Keyboard as Pointers The keyboard can be used as pointers while Number Lock is ON or OFF in order to increase navigation ease while entering numeric data in spreadsheets or similar applications. With Number Lock OFF, press [Fn] and one of the pointer keys shown below. For example [Fn][8] for up, [Fn][K] for down, [Fn][U] for left, and [Fn][O] for right. With Number Lock ON, use [Shift] and one of the pointer keys shown below.

For example [Shift][8] for up, [Shift][K] for down, [Shift][U] for left, and [Shift][O] for right. Notebook PC User Manual 45 Multimedia Control Keys (on selected models) The multimedia control keys allows for convenient controlling of the multimedia application. The following defines the meaning of each multimedia control key on the Notebook PC. Some control key functions may defer depending on Notebook PC model. Use the [Fn] key in combination with the arrow keys for CD control functions.

CD Play/Pause During CD stop, begins CD play. During CD play, pauses CD play. CD Stop During CD play: Stops CD play. CD Skip to Previous Track (Rewind) During CD play, skips to the previous audio track/ movie chapter. CD Skip to Next Track (Fast Forward) During CD play, skips to the next audio track/movie chapter. 46 Notebook PC User Manual Switches and Status Indicators Switches Power Switch The power switch turns ON and OFF the Notebook PC or putting the Notebook PC into sleep or hibernation modes. Actual behavior of the power switch can be customized in Windows Control Panel "Power Options." Notebook PC User Manual 47 Status Indicators Power Indicator The power indicator lights when the Notebook PC is turned ON and blinks slowly when the Notebook PC is in the Suspend-to-RAM (Sleep) mode. This indicator is OFF when the Notebook PC is turned OFF or in the Suspend-to-Disk (Hibernation) mode. Battery Charge Indicator (dual-color) The dual-color battery charge indicator shows the status of the battery's power as follows: Green ON: Battery power is between 95% and 100% (with AC power).

Orange ON: Battery power is less than 95% (with AC power). Orange Blinking: Battery power is less than 10% (without AC power). Off: Battery power is between 10% and 100% (without AC power). 48 Notebook PC User Manual Drive Activity Indicator Indicates that the Notebook PC is accessing one or more storage device(s) such as the hard disk. The light flashes proportional to the access time. Bluetooth / Wireless Indicator This is only applicable on models with internal Bluetooth (BT) and built-in wireless LAN. This indicator will light to show that the Notebook PC's built-in Bluetooth (BT) function is activated. When the built-in wireless LAN is enabled, this indicator will also light. (Windows software settings are necessary.) Number Lock Indicator Indicates that number lock [Num Lk] is activated when lighted.

Number lock allows some of the keyboard letters to act as numbers for easier numeric data input. Capital Lock Indicator Indicates that capital lock [Caps Lock] is activated when lighted. Capital lock allows some of the keyboard letters to type using capitalized letters (e.g. A, B, C).

When the capital lock light is OFF, the typed letters will be in the lower case form (e.g. a,b,c). Notebook PC User Manual 49 Chapter 4: Using the Notebook PC 4 Touchpad The touchpad is an interactive device that interprets the gestures and position of your fingers to simulate the functions of a regular mouse. It is also an alternative to mouse to position cursor onscreen.

The following illustration shows the features of the touchpad: Right-click button (area outside the dotted-line) Left-click button (area inside the dotted-line) DO NOT use any objects in place of your finger to operate the touchpad. These objects may damage the touchpad's surface. Notebook PC User Manual 51 Using the touchpad The touchpad allows you to use one-finger and multi-finger gestures to move the pointer so you can select and click items, rotate and zoom images, scroll lists, as well as swipe and switch between windows. Moving the pointer You can tap or click anywhere on the touchpad to activate its pointer, then slide your finger on the touchpad to move the pointer onscreen. Slide horizontally Slide vertically Slide diagonally 52 Notebook PC User Manual Touchpad usage illustrations Tapping - Tapping on the touchpad allows you to select items onscreen and open files. Tap once to select an item. Tap twice to open the selected item. Clicking - Clicking on the touchpad simulates the functions of the left mouse button and right mouse button. Left click Right click Click once to select an item, then double-click to open.

Click once to select an item and view its menu options. Dragging and dropping - Doing the drag-and-drop action on the touchpad allows you to move onscreen items into a new location. Drag Drop Select an item by tapping twice, Release your finger from the then slide the same finger without touchpad to drop the item on its lifting it off the touchpad. new location. Notebook PC User Manual 53 Rotating - Rotating images clockwise or counterclockwise is done on the touchpad by using two fingers. To rotate an image, place two fingers on the touchpad then turn one finger clockwise or counterclockwise while the other stays still. Scrolling - Using two fingers on the touchpad, you can scroll through lists vertically and horizontally. To enable continuous scrolling, hold your fingers on the edge of the touchpad when moving from up to down or left to right and vice versa. The mouse pointer changes to a double-headed arrow pointer when continuous scrolling is activated. Zooming - Using two fingers on the touchpad, you can enlarge or reduce the view size of your selected image. Bring together or spread apart two fingers to zoom in or out. 54 Notebook PC User Manual Three-finger swiping - Using three fingers on the touchpad, you can swipe pages from left to right or right to left. You can also use this gesture to switch between active windows on your desktop. Caring for the touchpad

The touchpad is pressure sensitive. If not properly cared for, it can be easily damaged.

Take note of the following precautions. · Ensure the touchpad does not come into contact with dirt, liquids or grease. · Do not touch the touchpad if your fingers are dirty or wet. · Do not rest heavy objects on the touchpad or the touchpad buttons.

· Don't scratch the touchpad with your fingernails or any hard objects.

The touchpad responds to movement not to force. There is no need to tap the surface too hard. Tapping too hard does not increase the responsiveness of the touchpad. The touchpad responds best to light pressure. Notebook PC User Manual 55 Disabling the touchpad automatically You can automatically disable the touchpad when an external USB mouse is attached. To disable the touchpad: 1. 2. 3. 4. Go to Control Panel.

Change view settings to Large Icons then select Mouse. Select the ELAN tab. Tick the box with the Disable when external pointing device plug in option.

Select Apply to save current changes or Select OK to save changes then exit. 56 Notebook PC User Manual Storage Devices Storage devices allow the Notebook PC to read or write documents, pictures, and other files to various data storage devices. Notebook PC User Manual 65 Connections The built-in network cannot be installed later as an upgrade. After purchase, network can be installed as an expansion card. Network Connection Connect a network cable, with RJ-45 connectors on each end, to the modem/network port on the Notebook PC and the other end to a hub or switch. For 100 BASE-TX / 1000 BASE-T speeds, your network cable must be category 5 or better (not category 3) with twisted-pair wiring. If you plan on running the interface at 100/1000Mbps, it must be connected to a 100 BASE-TX / 1000 BASE-T hub (not a BASE-T4 hub). For 10Base-T, use category 3, 4, or 5 twisted-pair wiring. 10/100 Mbps Full-Duplex is supported on this Notebook PC but requires connection to a network switching hub with "duplex" enabled. The software default is to use the fastest setting so no user-intervention is required. 1000BASE-T (or Gigabit) is only supported on selected models.

66 Notebook PC User Manual Twisted-Pair Cable The cable used to connect the Ethernet card to a host (generally a Hub or Switch) is called a straight-through Twisted Pair Ethernet (TPE). The end connectors are called RJ-45 connectors, which are not compatible with RJ-11 telephone connectors. If connecting two computers together without a hub in between, a crossover LAN cable is required (Fast-Ethernet model). (Gigabit models support auto-crossover so a crossover LAN cable is optional.) Implementing the IEEE 802.11 standard for wireless LAN (WLAN), the optional built-in wireless LAN is capable of fast data transmission rates using Direct Sequence Spread Spectrum (DSSS) and Orthogonal Frequency Division Multiplexing (OFDM) technologies on 2.4GHz/5GHz frequencies. The optional built-in wireless LAN is backward compatible with the earlier IEEE 802.11 standards allowing seamless interfacing of wireless LAN standards. The optional built-in wireless LAN is a client adapter that supports Infrastructure and Ad-hoc modes giving you flexibility on your existing or future wireless network configurations for distances up to 40 meters between the client and the access point. To provide efficient security to your wireless communication, the optional built-in wireless LAN comes with a 64-bit/128-bit Wired Equivalent Privacy (WEP) encryption and Wi-Fi Protected Access (WPA) features. For security concerns, DO NOT connect to the unsecured network; otherwise, the information transmission without encryption might be visible to others. 68 Notebook PC User Manual Ad-hoc mode The Ad-hoc mode allows the Notebook PC to connect to another wireless device.

No access point (AP) is required in this wireless environment. (All devices must install optional 802.11 wireless LAN adapters.) Both the external USB keyboard and mouse will work simultaneously with the Notebook PC's built-in keyboard and touchpad. Printer Connection One or more USB printers can be simultaneously used on any USB port or USB hub. A-2 Notebook PC User Manual Operating System and Software This Notebook PC may offer (depending on territory) its customers the choice of a pre-installed Microsoft Windows operating system. The choices and languages will depend on the territory. The levels of hardware and software support may vary depending on the installed operating system. The stability and compatibility of other operating systems cannot be guaranteed. Support Software This Notebook PC comes with a support disc that provides BIOS, drivers and applications to enable hardware features, extend functionality, help manage your Notebook PC, or add functionality not provided by the native operating system. If updates or replacement of the support disc is necessary, contact your dealer for web sites to download individual software drivers and utilities.

The support disc contains all drivers, utilities and software for all popular operating systems including those that have been preinstalled. The support disc does not include the operating system itself. The support disc is necessary even if your Notebook PC came pre-configured in order to provide additional software not included as part of the factory pre-install. A recovery disc is optional and includes an image of the original operating system installed on the hard drive at the factory. The recovery disc provides a comprehensive recovery solution that quickly restores the Notebook PC's operating system to its original working state provided that your hard disk drive is in good working order. Contact your retailer if you require such a solution. Some of the Notebook PC's components and features may not work until the device drivers and utilities are installed. A-15 Notebook PC User Manual Recovering Your Notebook PC Using Recovery Partition The Recovery Partition quickly restores your Notebook PC's software to its original working state. Before using the Recovery Partition, copy your data files (such as Outlook PST files) to USB storage devices or to a network drive and make note of any customized configuration settings (such as network settings). About the Recovery Partition The Recovery Partition is a reserved space on your hard disk drive used to restore the operating system, drivers, and utilities installed on your Notebook PC at the factory. **IMPORTANT!** DO NOT delete the partition named RECOVERY. The Recovery Partition is created at the factory and cannot be restored if deleted. Take your Notebook PC to an authorized ASUS service center if you have problems with the recovery process. Using the Recovery Partition: 1. 2. 3. 4.

Press [F9] during bootup. Press [Enter] to select Windows Setup [EMS Enabled]. Read the ASUS Preload Wizard messages and click Next. Select a partition option and click Next. Partition options: Recover Windows to first partition only. This option deletes only the first partition and allows you to keep other partitions, and to create a new system partition as drive "C" . Recover Windows to entire HD. This option deletes all partitions from your hard disk drive and creates a new system partition as drive "C" . A-16 Notebook PC User Manual 5. Recover Windows to entire HD with two partitions.

This option deletes all partitions from your hard drive and creates two new partitions "C" (40%) and "D" (60%). Follow the onscreen instructions to complete the recovery process. Visit the ASUS website at www.asus.com for updated drivers and utilities.

Using Recovery DVD (on selected models) Creating the Recovery DVD: 1. From Start Menu, go to All Applications > ASUS and then click AI Recovery. 2. Insert a blank writable DVD into the optical drive and click Start to start creating the Recovery DVD. 3.

Follow the onscreen instructions to complete creating the recovery DVD. Prepare enough blank writable DVDs as instructed to create the Recovery DVD. **IMPORTANT!** Remove the external hard disk drive before performing system recovery on your Notebook PC. According to Microsoft, you may lose important data because of setting up Windows on the wrong disk drive or formatting the incorrect drive partition. Notebook PC User Manual A-17 Using the Recovery DVD: : 1. 2. 3. 4. Insert the Recovery DVD into the optical drive. Your Notebook PC needs to be powered ON.

Restart the Notebook PC and press [Esc] on bootup and select the optical drive (may be labeled as "CD/DVD") and press [Enter] to boot from the Recovery DVD. Select OK to start to restore the image. Select OK to confirm the system recovery. Restoring will overwrite your hard drive. Ensure to back up all your important data before the system recovery. 5. Follow the onscreen instructions to complete the recovery process. **WARNING: DO NOT** remove the Recovery disc, unless instructed to do so, during the recovery process or else your partitions will be unusable. Ensure to connect the power adapter to your Notebook PC when performing system recovery. Unstable power supply may cause recovery failure.

Visit the ASUS website at www.asus.com for updated drivers and utilities. A-18 Notebook PC User Manual DVD-ROM Drive Information The Notebook PC comes with an optional DVD-ROM drive or a CD-ROM drive. In order to view DVD titles, you must install your own DVD viewer software.

Optional DVD viewer software may be purchased with this Notebook PC. The DVD-ROM drive allows the use of both CD and DVD discs. Regional Playback Information Playback of DVD movie titles involves decoding MPEG2 video, digital AC3 audio and decryption of CSS protected content. CSS (sometimes called copy guard) is the name given to the content protection scheme adopted by the motion picture industry to satisfy a need to protect against unlawful content duplication.
