**Manual abstract:**

8 Establishing a connection with two cell phones . 14 Bluetooth Headset BT HS 112 The Bluetooth Headset BT HS 112 allows a wireless connection with Bluetooth-ready cell phones for hands-free telephone calls with excellent sound quality. The headset can be connected with two cell phones at the same time.

Individual design variants and a weight of only 6 grams offer optimal user convenience. To obtain the best sound quality, the headset and the cell phone should be used on the same side of the body. 2 Safety and general information Read these operating instructions carefully and completely before using the headset. If you are using the headset while driving, observe all local laws. Do not use the headset in situations that require special attention, such as road traffic. Keep the headset and accessories out of reach of children under 3 years of age. Set the volume to low before putting on the headset. Always listen at a moderate volume to protect your hearing. To avoid damages and malfunctions, do not drop the headset. Ensure that no liquid enters the headset. It can destroy the electronics of the headset and possibly cause a short circuit. Do not expose the headset to extreme temperatures.

The ideal operating temperature is between 10 °C and 40 °C. It will immediately void the warranty. The ear plug is supplied in three different sizes. Replace the ear plug if it does not fit correctly. To provide additional support, you can use the ear hook while wearing the headset.

Attach the ear hook onto the headset as shown in the figure. 4 Battery information The headset is equipped with an integrated lithium-polymer battery. The battery cannot be replaced. The full performance of a new battery is not achieved until after two or three complete charging-discharging cycles. The battery can be charged and discharged several hundred times, but it loses its capacity over time. Disconnect the BT HS 112 from the power supply as soon as the battery is fully charged, since overcharging would reduce the service life of the battery. A charged battery loses its capacity if it is not used.

Important: Ensure that the battery is fully charged if you do not use the headset for a longer period of time. To avoid a complete discharge of the battery, the BT HS 112 should be charged at least every 2 months. 5 Charging the battery The BT HS 112 is operated with a rechargeable battery.

Charge the battery completely before its first use. The charging process of the battery lasts approx. 1 hour. Read the section "Battery information" before starting the charging process. risk of injuries! The headset may not be used during the charging process. The battery is being charged and all connections are disconnected. During the charging process, the LED display lights red. After the battery is fully charged, the LED display lights blue.

Disconnect the BT HS 112 from the charger after it has been charged. the headset is switching on.

Note: After switch-on, the BT HS 112 automatically attempts to establish a connection with the two most recently connected cell phones. Switching off Press the MF button for approx. 3 seconds until you hear a low-pitched signal tone and the LED display lights red. the headset is switching off. Note: If no connection exists to a cell phone, the BT HS 112 automatically switches off after one hour.

7 Registering (pairing) and connecting with the cell phone Before you can use the BT HS 112, you must register and connect it with a Bluetooth-ready cell phone. Registering is a one-time process and required only for the first connection with the cell phone. The BT HS 112 can be registered with up to eight cell phones and be connected simultaneously with two cell phones. The BT HS 112 must be switched off. Press the MF button for approx.

the headset is in registration mode. (Note: The PIN code is preprogrammed and cannot be changed. For some cell phones, you have to manually confirm the connection. In this case, repeat the registering. Then it connects itself with the next most recently connected one. This allows you to determine the sequence of connections. Note that voice dialling is available only for the first device and the operation for redialling the last number differs for the first and the second device. The other functions are executed the same way using the BT HS 112 as a connection with only one cell phone. 9 Operating the BT HS 112 Making a call Voice dialling\* To activate voice dialling, briefly press the MF button. You hear several signal tones.

After the signal tone, speak the voice command. After the voice command has been recognized, the cell phone dials the number associated with it. Note: If two cell phones are connected with the BT HS 112, the voice commands are directed only to the cell phone connected first. Redialling the last number\* Press the MF button twice. You hear a signal tone and the number dialled last is being redialled. The call is automatically transferred to the BT HS 112.

Ending a call Briefly press the MF button to end a call. warning: Always listen at a moderate volume to protect your hearing. The LED display flashes red every 10 seconds and you hear two signal tones. Press the "V" volume button again for 3 seconds to cancel mute.

10 Transferring a call To transfer a call from the headset to the cell phone, press the volume buttons "+" and "V" at the same time. Repeat the step to transfer the call back to the headset. Note: With some cell phones, the connection is disconnected if you transfer the call to the cell phone. To transfer the call back to the headset, you have to press the MF button instead of the volume buttons "+" and "V". Managing calls\* You can answer and manage two calls on one of the connected cell phones via the BT HS 112.

Note: You do not have the option of managing several calls from two connected cell phones at the same time. End the active call and answer the incoming call. Continue the active call and reject the incoming call. Change between the active call and the one on hold. End the active call and answer the call on hold.

Continue the active call and end the call on hold. Press the MF button for 2 seconds. You are conducting two calls, an active one and one on hold Press the MF button for 2 seconds. the call on hold. \* The cell phone must support this function. The BT HS 112 must be switched on and no connection may exist to a cell phone. Press and hold down the "+" and "V" volume buttons simultaneously for approx. 10 seconds until the LED display intermittently flashes lights red and blue. After the factory settings have been restored, the LED display stops flashing intermittently.
