Manual abstract:

It ensures unsurpassed closeness and comfort for you and optimum care for your shaver: The system recognizes when cleaning of your shaver is required, and automatically recognizes which of the three cleaning programs is appropriate. While the shaver is connected to the mains, the system automatically takes care of charging and discharging in a way that is optimized for the shaver's battery capacity and life span. Do not exchange or manipulate any part of it. Otherwise there is risk of electric shock. Do not place the station in a mirror cabinet, nor store it over radiators, nor place it on polished or laquered surfaces. Keep it away from sources of ignition, no smoking. Keep out of reach of children. Special cord set «start cleaning» button Station-to-shaver connecting contacts Station lift button for cartridge exchange Display for cleaning programs Display for cleaning fluid status Station mains socket Cleaning cartridge Shaver foil protection cap Shaver foil Cutter block Foil release buttons Long hair trimmer Shaver-to-station connecting contacts (shaver backside) Switch Shaver display Info key Pilot light Shaver mains socket If you wish, you may start shaving right away (if the shaver is charged, see section «Shaver display»). However, we recommend to follow the procedure described here: Using the special cord set (1), connect the mains socket of the Clean&Renew™ station (7) to an electrical outlet.

Carefully remove the lid from the cartridge. Slowly close the housing by pushing it down until it locks. The display for cleaning fluid (6) will show how much cleaning fluid is in the cartridge: a) cleaning solution sufficiently available b) up to 7 cleanings left c) new cartridge required Make sure the foil protection cap (9) is removed from the shaver. Insert the shaver head down into the station (the contacts (14) on the back of the shaver will correspond to the contacts (3) in the station). If necessary, the system will now charge the shaver.

Also, the cleaning status will be automatically analyzed and one of the four diodes of the cleaning program display (5) will light up: a) the shaver is clean b) eco(nomic), i. e. Short cleaning required c) normal cleaning required d) intensive cleaning required If the system has selected one of the three cleaning programs, it will not start until you push down the «start cleaning» button (2). This locks the shaver into the station and starts the cleaning process. we recommend cleaning after each shave.

While the cleaning is in progress, the respective cleaning program light will flash. Each cleaning consists of several cycles (where the cleaning fluid is flushed through the shaver head) and a heat drying period. While the shaver is drying, the metal parts of the shaver may be hot. Also, if the shaver is taken out prematurely and is not dry, its electronics could be harmed. Your shaver is now clean and ready for use. Stretch your skin and shave against the direction of beard growth. All charging and cleaning needs are then taken care of. switch on the shaver for approx. 5-10 seconds so that the shaved stubbles can fall out. Never use water to clean the shaver.

remove the shaver foil and tap it out on a flat surface. Using the brush, clean the inner area of the pivoting head. Before discarding the used cartridge, make sure to close the openings using the lid of the new cartridge, since the used cartridge will contain contaminated cleaning solution. Fix on off Self testing / shaver is fully charged (a full charge will give up to 50 minutes of cordless shaving time, depending on your beard growth). To maintain 100% shaving performance, replace your foil and cutter block, when the display shows «replace foil» (after about 18 months) or when the shaving parts are worn. Change both parts at the same time for a closer shave with less skin irritation. (Shaver foil (10) and cutter block (11): 8000 series) The display will keep on reminding you during the next 7 days to replace the shaving parts. then the shaver will automatically reset the display. After you have replaced the shaving parts (foil and cutter block) push the info key (17) 4 times until the display shows «reset foil? ». Then push the info key for at least 3 seconds to reset the display.

while doing so, the display blinks. When the reset is complete the display shows «reset ok». The manual reset can be done at any time. Allow the shaver to remain for some time at room temperature for optimal charging conditions. Intensive cleaning needed return to the Clean&Renew™ station as soon as possible.

To reset the display, push the info key (17). Press again: key part number for shaver foil and cutter block. The cartridge can be disposed with regular garbage. Subject to change without notice. this product conforms to the European Directives EMC 2004/108/EC and Low Voltage 2006/95/EC. At the end of the product's useful life, please dispose of it at appropriate collection points provided in your country. .
