2 Chapter 5 5.1 Appendix A Index 3 2010-11-05 Contents 4 2010-11-05 About this Guide About this Guide This guide is intended for business intelligence decision-makers and administrators responsible for installing and using Dashboard Design and Presentation Design on Windows client machines in corporate environments. Note: The two products are documented in a single user guide because they have many common features. @@@@Related Topics · System requirements 5 2010-11-05 About this Guide 6 2010-11-05 Planning Installations Planning Installations 2.1 Getting started 2.1.1 Overview of Dashboard Design and Presentation Design Dashboard Design is a data visualization tool that allows you to create dynamic, interactive dashboards. These dashboards access live data, and you can add them to web-based dashboards. Presentation Design is a presentation tool that allows you to create dynamic, interactive presentations from Excel spreadsheets. For more information about features and capabilities, see the Dashboard Design and Presentation Design User Guide.

2.1.2 Installation types You can install Dashboard Design and Presentation Design on a client or a stand-alone Windows machine. An interactive installation involves running a program from the installation media. If you have a large-scale deployment, you can perform one of the following silent installations: · · Scripted silent installation involves writing parameters to a response.ini file, and then using the file to run the installation program. Command-line silent installation involves passing parameters to the installation program directly. Related Topics · Interactive installations · Silent installations 7 2010-11-05 Planning Installations 2.1.2.

1 Integration SAP deployments You can install Dashboard Design on a client machine, and use it to connect to an SAP Crystal Reports Server OEM Edition or SAP BusinessObjects Enterprise deployment. You can also install Dashboard Design on a stand-alone machine side by side with a Crystal Reports or Enterprise deployment. Your deployment must be operational and accessible when you run the installation program. SAP systems You can integrate Dashboard Design with SAP systems by deploying SAP NetWeaver BW 7.0 Ehp1 SP5 (or later).

Note: Before you install Dashboard Design, install SAP Frontend 7.x with BI Add Ons. Dashboard Design requires Java and ABAP to connect to NetWeaver BW. For more information about deploying NetWeaver BW, see the documentation available at <http://help.sap.com>.

com. Live Office If you want to create Live Office objects, you can install Live Office after you install Dashboard Design. Note: Live Office is not required for refresh capabilities. 2.2 Key tasks 2.2.1 Interactive installations Interactive installations allow you to install and configure Dashboard Design and Presentation Design on a client or a standalone Windows machine using a wizard. 8 2010-11-05 Planning Installations Note: You must have Administrator privileges on your local machine to install Dashboard Design or Presentation Design. Before you install the products, ensure that Adobe Flash Player with ActiveX 9.0 (or later) and Microsoft Excel 2003 (or later) are installed.

@@@Related Topics · To install Dashboard Design or Presentation Design interactively 2.2.2 Silent installations Silent installations allow you to install and configure Dashboard Design and Presentation Design on a client or a stand-alone Windows machine. Note: You must have Administrator privileges on your local machine to install Dashboard Design or Presentation Design. You can run an unattended silent installation from the installation media using a

response.ini file. You can also specify installation parameters directly at the command line. All options available during interactive installations are also available during silent installations. Scripted and command-line silent installations use the same parameters. Using a response.

ini file is recommended if your installation requires a large number of parameters, or if you want to integrate scripts and commands into your own installation scripts. Dashboard Design and Presentation Design do not support silent installations when the installation files are on multiple media sources. In this case, you must first copy all installation contents to a single location, and then run the silent installation. Before you install the products, ensure that Adobe Flash Player with ActiveX 9.0 (or later) and Microsoft Excel 2003 (or later) are installed.

Run setup.exe from the Dashboard Design or Presentation Design media. The interactive installation wizard appears. 2. Select a language for the installation program, and click OK.

3. The "Specify the destination folder" page appears. 4. (Optional) Enter the installation directory.
