

Your PDF Guides

You can read the recommendations in the user guide, the technical guide or the installation guide for D-LINK DAP-2310. You'll find the answers to all your questions on the D-LINK DAP-2310 in the user manual (information, specifications, safety advice, size, accessories, etc.). Detailed instructions for use are in the User's Guide.

Manual abstract:

An ideal solution for quickly creating and extending a wireless local area network (WLAN) in offices or other workplaces, trade shows, and special events, the DAP-2310 provides data transfer rates up to 300Mbps.) WPA/WPA2 is offered in two options: Enterprise (used for corporations) and Personal (used for home users). WPA-Personal and WPA2-Personal are directed towards home users who do not have the server-based equipment required for user authentication. This method of authentication is similar to WEP because you define a "Pre-Shared Key" on the wireless router/AP. Once the pre-shared key is confirmed and satisfied at both the client and access point, access is then granted. The encryption method used is referred to as the Temporal Key Integrity Protocol (TKIP), which offers per-packet dynamic hashing. It also includes an integrity checking feature which ensures that the packets were not tampered with during wireless transmission. WPA-Enterprise and WPA2-Enterprise are ideal for businesses that already have existing security infrastructures established. Management and security implementation can now be centralized on a server participating on the network. utilizing 802.

IX with a RADIUS (Remote Authentication Dial-in User Service) server, a network administrator can D-Link DAP-2310 User Manual 5 Section 1 - Product Overview define a list of authorized users who can access the wireless LAN. When attempting to access a wireless LAN with WPA-Enterprise configured, the new client will be requested to enter a username with a password. If the new client is authorized by the administration, and enters the correct username and password, then access is granted. In the case where an employee leaves the company, the network administrator is able to remove the previous employee from the authorized list to avoid compromising the network. eAP (Extensible Authentication Protocol) is available through the Windows® XP operating system.

You will need to use the same type of EAP protocol on all devices in your network when using the 802. Network conditions and environmental factors, including volume of network traffic, building materials and construction, and network overhead can lower actual data throughout rate. D-Link DAP-2310 User Manual 6 Section 1 - Product Overview " Five different operation modes - Capable of operating in one of four different operation modes to meet your wireless networking needs: Access Point, WDS with AP, WDS, Wireless Client or AP Repeater mode. 11b standard to provide a wireless data rate of up to 11Mbps, allowing you to migrate your system to the 802. 11n and 802.

11g standards on your own schedule without sacrificing connectivity. " Better security with WPA - The DAP-2310 can securely connect wireless clients on the network using WPA (Wi-Fi Protected Access) to provide a much higher level of security for your data and communications than its previous versions. " AP Manager II management software - The real-time display of the network's topology and AP's information makes network configuration and management quick and simple. " SNMP for management - The DAP-2310 is not just fast, but also supports SNMP v. 3 for better network management.

Superior wireless AP manager software is bundled with the DAP-2310 for network configuration and firmware upgrade. Systems administrators can also set up the DAP-2310 easily with the Web-based configuration. a D-Link D-View 6. 0 module will be downloadable for network administration and real-time network traffic monitoring with D-Link D-View 6. Network conditions and environmental factors, including volume of network traffic, building materials and construction, and network overhead can lower actual data throughout rate.

Features D-Link DAP-2310 User Manual 7 Section 2 - Installation Wireless Basics D-Link wireless products are based on industry standards to provide high-speed wireless connectivity that is easy to use within your home, business or public access wireless networks. D-Link wireless products provides you with access to the data you want, whenever and wherever you want it. Enjoy the freedom that wireless networking can bring to you. WLAN use is not only increasing in both home and office environments, but in public areas as well, such as airports, coffee shops and universities. Innovative ways to utilize WLAN technology are allowing people to work and communicate more efficiently. Increased mobility and the absence of cabling and other types of fixed infrastructure have proven to be beneficial to many users. Wireless adapter cards used on laptop and desktop systems support the same protocols as Ethernet adapter cards, allowing wireless users to use the same applications as those used on a wired network. People use WLAN technology for many different purposes: Mobility - productivity increases when people can have access to data in any location within the operating range of their WLAN. Management decisions based on real-time information can significantly improve the efficiency of a worker. Low implementation costs - WLANs are easy to set up, manage, change and relocate.

Networks that frequently change can benefit from WLAN's ease of implementation. WLANs can operate in locations where installation of wiring may be impractical. Installation and network expansion - by avoiding the complications of troublesome cables, a WLAN system can be fast and easy during installation, especially since it can eliminate the need to pull cable through walls and ceilings. Wireless technology provides more versatility by extending the network beyond the home or office. inexpensive solution - wireless network devices are as competitively priced as conventional Ethernet network devices.

The DAP-2310 saves money by providing users with multi-functionality configurable in four different modes. Scalability - Configurations can be easily changed and range from Peer-to-Peer networks, suitable for a small number of users to larger Infrastructure networks to accommodate hundreds or thousands of users, depending on the number of wireless devices deployed. 11g standards that came before it. It increases the maximum wireless signal rate up to 300Mbps* within the 2. 4GHz bands , utilizing OFDM technology.

This means that in most environments - within the specified range of this device - you will be able to transfer large files quickly, or even watch a movie in MPEG format over your network without noticeable delays. This technology works by transmitting high-speed digital data over a radio wave utilizing OFDM (Orthogonal Frequency Division Multiplexing) technology. OFDM works by splitting the radio signal into multiple smaller sub-signals that are then simultaneously transmitted at different frequencies to the receiver. OFDM reduces the amount of crosstalk (interference) in signal transmissions. The D-Link DAP-2310 will automatically sense the best possible connection speed to ensure the greatest possible speed and range.

[You're reading an excerpt. Click here to read official D-LINK DAP-2310 user guide](http://yourpdfguides.com/dref/5323159)
<http://yourpdfguides.com/dref/5323159>

IEEE 802.11n offers the most advanced network security features available today, including WPA. Network conditions and environmental factors, including volume of network traffic, building materials and construction, and network overhead can lower actual data throughput rate. D-Link DAP-2310 User Manual 9 Section 2 - Installation Wireless Installation Considerations The D-Link AirPremier® N wireless access point lets you access your network using a wireless connection from virtually anywhere within the operating range of your wireless network. Keep in mind, however, that the number, thickness and location of walls, ceilings, or other objects that the wireless signals must pass through, may limit the range.

Typical ranges vary depending on the types of materials and background RF (radio frequency) noise in your home or business. The key to maximizing wireless range is to follow these basic guidelines: 1. Keep the number of walls and ceilings between the access point and other network devices to a minimum. Each wall or ceiling can reduce your adapter's range from 3-90 feet (1-30 meters). Position your devices so that the number of walls or ceilings is minimized. 2. Be aware of the direct line between network devices. 5 meters), at a 45-degree angle appears to be almost 3 feet (1 meter) thick. At a 2-degree angle, it looks over 42 feet (14 meters) thick! Position devices so that the signal will travel straight through a wall or ceiling (instead of at an angle) for better reception. 3.

Building Materials make a difference. A solid metal door or aluminum studs may have a negative effect on the range. Try to position access points, wireless routers, and computers so that the signal passes through drywall or open doorways. Materials and objects such as glass, steel, metal, walls with insulation, water (fish tanks), mirrors, file cabinets, brick, and concrete will degrade your wireless signal. 4.

Keep your product away (at least 3-6 feet or 1-2 meters) from electrical devices or appliances that generate RF noise. 5. If you are using 2.4GHz cordless phones or X-10 (wireless products such as ceiling fans, lights, and home security systems), your wireless connection may degrade dramatically or drop completely. Make sure your 2.

4GHz phone base is as far away from your wireless devices as possible. The base transmits a signal even if the phone is not in use. d-Link DAP-2310 User Manual 10 Section 2 - Installation Hardware Overview Power Receptacle The supplied power adapter connects here. Reset Button A pinhole button located beside the Ethernet socket is used to reset the system or restore the factory default settings. Note: After resetting the unit, you will still be able to access the data on your hard drives. LAN Port An Ethernet port that connects the unit to a network. Power LED This light will be solid green when the unit is powered on. WLAN LED This light will be flickering green when the 2.4GHz frequency is in use. LAN LED This light will be flickering green when there is active LAN traffic.

D-Link DAP-2310 User Manual 11 Section 2 - Installation Five Operational Modes Access Point (AP) WDS with AP WDS Wireless Client AP Repeater Create a wireless LAN Wirelessly connect multiple networks while still functioning as a wireless AP Wirelessly connect multiple networks AP acts as a wireless network adapter for your Ethernet-enabled device AP acts as repeater to extend to wireless coverage. d-Link DAP-2310 User Manual 12 Section 2 - Installation Getting Started 1. You will need broadband Internet access. 2. Consult with your cable or DSL provider for proper installation of the modem. See the printed Install Guide included with your router. 4. If you are connecting a desktop computer to your network, install a wireless PCI adapter into an available PCI slot on your desktop computer. 5. Install the drivers for your wireless CardBus adapter into a laptop computer.

D-Link DAP-2310 User Manual 13 Section 3 - Configuration To configure the DAP-2310, use a computer that is connected to the DAP-2310 with an Ethernet cable (see the Network Layout diagram). launch your web browser. Type the IP address of the DAP-2310 in the address field (http://192. Make sure that the IP addresses of the DAP-2310 and your computer are in the same subnet. Note: If you have changed the default IP address assigned to the DAP-2310, make sure to enter the correct IP address.

Enter the user name (admin) and your password. Leave the password field blank by default and click Login. Configuration Note: If you have changed the password, make sure to enter the correct password. Use the drop-down menu to choose Open System, Shared Key, or WPA-Personal. Select Open System to communicate the key across the network. Select Shared Key to limit communication to only those devices that share the same WEP settings. If multi-SSID is enabled, this option is not available. Select WPA-Personal to secure your network using a password and dynamic key changes. no RADIUS server is required. D-Link DAP-2310 User Manual 19 Section 3 - Configuration WDS mode In WDS mode, the DAP-2310 wirelessly connects multiple networks, without functioning as a wireless AP. Network Service Set Identifier (SSID) is the name Name (SSID): designated for a specific wireless local area network (WLAN). The SSID's factory default setting is dlink. @@ SSID Enable or Disable SSID visibility. Enabling this Visibility: feature broadcasts the SSID across the network, thus making it visible to all network users. Auto Channel Enabling this feature automatically selects Selection: the channel that will provide the best wireless performance.

This feature is not supported in WDS mode. Channel: All devices on the network must share the same channel. To change the channel, use the drop-down menu to make the desired selection. Channel Use the drop-down menu to choose 20 MHz or Width: Auto 20/40 MHz. Remote Enter the MAC addresses of the APs on your AP MAC network that will serve as bridges to wirelessly Address: connect multiple networks. D-Link DAP-2310 User Manual 20 Section 3 - Configuration Site Survey: Click on the Scan button to search for available wireless networks, then click on the available network that you want to connect with. Authentication: Use the drop-down menu to choose Open System, Shared Key, or WPA-Personal. Select Open System to communicate the key across the network. Select Shared Key to limit communication to only those devices that share the same WEP settings. Select WPA-Personal to secure your network using a password and dynamic key changes.

@@The SSID's factory default setting is dlink. The SSID can be easily changed to connect to an existing wireless network. this option is unavailable in Wireless Client mode. Enabling this feature automatically selects the channel that will provide the best wireless performance. This feature is not supported in Wireless Client mode.

Gateway IP Address: Gateway MAC Address: D-Link DAP-2310 User Manual 45 Section 3 - Configuration Dynamic Pool Settings The DHCP address pool defines the range of the IP address that can be assigned to stations in the network.

A Dynamic Pool allows wireless stations to receive an available IP with lease time control. If needed or required in the network, the DAP-2310 is capable of acting as a DHCP server. function Enable/ Disable: Dynamic Host Configuration Protocol (DHCP) assigns dynamic IP addresses to devices on the network. This protocol simplifies network management and allows new wireless devices to receive IP addresses automatically without the need to manually assign new IP addresses. select Enable to allow the DAP-2310 to function as a DHCP server.

Input the first IP address available for assignment on your network. Enter the number of IP addresses available for assignment. IP addresses are increments of the IP address specified in the IP Assigned From field. All devices in the network must have the same subnet mask to communicate. Enter the submask for the network here. Enter the IP address of the gateway on the network. Specify the Windows Internet Naming Service (WINS) server address for the wireless network. WINS is a system that determines the IP address of a network computer that has a dynamically assigned IP address. DHCP Server IP Assigned From: The Range of Pool (1-254): Subnet Mask: Gateway: WINS: D-Link DAP-2310 User Manual 46 Section 3 - Configuration DNS: Domain Name: Lease Time (60-31536000 sec): Enter the IP address of the Domain Name System (DNS) server. The DNS server translates domain names such as www.

Enter the domain name of the network, if applicable.) The lease time is the period of time before the DHCP server will assign new IP addresses. D-Link DAP-2310 User Manual 47 Section 3 - Configuration Static Pool Setting The DHCP address pool defines the range of IP addresses that can be assigned to stations on the network. A static pool allows specific wireless stations to receive a fixed IP without time control. function Enable/ Disable: Dynamic Host Configuration Protocol (DHCP) assigns IP addresses to wireless devices on the network. This protocol simplifies network management and allows new wireless devices to receive IP addresses automatically without the need to manually assign IP addresses. select Enable to allow the DAP-2310 to function as a DHCP server. Use the Static Pool Settings to assign the same IP address to a device every time you start up. The IP addresses assigned in the Static Pool list must NOT be in the same IP range as the Dynamic Pool. After you have assigned a static IP address to a device via its MAC address, click Save; the device will appear in the Assigned Static Pool at the bottom of the screen.

You can edit or delete the device in this list. Enter the MAC address of the device requesting association here. Define the submask of the IP address specified in the IP Assigned From field. Assigned IP: Assigned MAC Address: Subnet Mask: D-Link DAP-2310 User Manual 48 Section 3 - Configuration Gateway: WINS: DNS: Specify the Gateway address for the wireless network. Specify the Windows Internet Naming Service (WINS) server address for the wireless network.

WINS is a system that determines the IP address of a network computer with a dynamically assigned IP address, if applicable. Enter the Domain Name System (DNS) server address for the wireless network. The DNS server translates domain names such as www. Specify the domain name for the network. Domain Name: D-Link DAP-2310 User Manual 49 Section 3 - Configuration Current IP Mapping List This window displays information about the current assigned DHCP dynamic and static IP address pools.

This information is available when you enable DHCP server on the AP and assign dynamic and static IP address pools.

Current DHCP These are IP address pools the DHCP server Dynamic Profile: has assigned using the dynamic pool setting. Host Name: The host name of a device on the network that is assigned an IP address from the DHCP dynamic pool. Binding MAC The MAC address of a device on the network Address: that is assigned an IP address from the DHCP dynamic pool. Assigned IP The current corresponding DHCP-assigned IP Address: address of the device. Lease Time: The length of time that the dynamic IP address will be valid. Current DHCP These are the IP address pools of the DHCP Static Pools: server assigned through the static pool settings. Host Name: The host name of a device on the network that is assigned an IP address from the DHCP dynamic pool. Binding MAC The MAC address of a device on the network that is within the DHCP static IP address pool. Address: Assigned IP The current corresponding DHCP-assigned static IP address of the device.

Select Accept to accept only those devices with MAC addresses in the Access Control List. All other devices not on the list will be rejected. Select Reject to reject the devices with MAC addresses on the Access Control List. All other devices not on the list will be accepted. MAC Address: MAC Address List: Enter each MAC address that you wish to include in your filter list, and click Add. When you enter a MAC address, it appears in this list. Highlight a MAC address and click Delete to remove it from this list. You may create an ACL list and upload it to the access point instead of manually entering the information. Once created, click the Browse button and locate your file. select it and then click Upload.

Click Download to export the ACL to a file on your computer. When disabled, all data from the Ethernet to associated wireless devices will be blocked. Wireless devices can still send data to the Ethernet. The default value is Enable, which allows stations to inter-communicate by connecting to a target AP. When disabled, wireless stations cannot exchange data through the AP.

Internal Station Connection: D-Link DAP-2310 User Manual 52 Section 3 - Configuration Device Information Device This read-only window displays the configuration Information: settings of the DAP-2310, including the firmware version and the device's MAC address. Status D-Link DAP-2310 User Manual 53 Section 3 - Configuration Client Information Client Information: This window displays the wireless client information for clients currently connected to the DAP-2310. The following information is available for each client communicating with the DAP-2310. SSID: MAC: Band: Authentication: Signal: Power Saving Mode: Displays the SSID of the client. Displays the MAC address of the client.

Displays the wireless band that the client is connected to. Displays the type of authentication being used. displays the client's signal strength. Displays the status of the power saving feature. D-Link DAP-2310 User Manual 54 Section 3 - Configuration WDS Information WDS Information: This window displays the Wireless Distribution System information for clients currently connected to the DAP-2310. The following information is available for each client communicating with the DAP-2310. Name: MAC: Authentication: Signal: Status: Displays the SSID of the client. Displays the MAC address of the client. Displays the type of authentication being used. displays the client's signal strength.

Displays the status of the power saving feature. D-Link DAP-2310 User Manual 55 Section 3 - Configuration Ethernet Ethernet Traffic Statistics: This page displays transmitted and received count statistics for packets and bytes. Stats D-Link DAP-2310 User Manual 56 Section 3 - Configuration WLAN Traffic WLAN Traffic Statistics: This page displays wireless network statistics for data throughput, transmitted and received frames, and frame errors. D-Link DAP-2310 User Manual 57 Section 3 - Configuration View Log View Log: The AP's embedded memory displays system and network messages including a time stamp and message type. The log information includes but is not limited to the following items: cold start AP, upgrading firmware, client associate and disassociate with AP, and web login. the web page holds up to 500 logs. Log D-Link DAP-2310 User Manual 58 Section 3 - Configuration Log Settings Log Server/IP Address: Log Type: Enter the IP address of the server you would like to send the DAP-2310 log to. Check the box for the type of activity you want to log. Select the SMTP server from the drop-down menu. Select when to send the log to your email (in hours).

You will receive an email when the log is full too. 59 Email Notification: Outgoing Mail Server (SMTP): Authentication: SSL / TLS: From Email Address: To Email Address: Email Server Address: SMTP Port: Username: Password: Confirm Password: Schedule: D-Link DAP-2310 User Manual Section 3 - Configuration Administration Settings Check one or more of the five main categories to display the various hidden administrator parameters and settings displayed on the next five pages. maintenance D-Link DAP-2310 User Manual 60 Section 3 - Configuration Limit Administrator Each of the five main categories display various hidden administrator parameters and settings. Limit Administrator VLAN ID: Limit Administrator IP: IP Range: Check the box provided and the enter the specific VLAN ID that the administrator will be allowed to log in from. check to enable the Limit Administrator IP address. Enter the IP address range that the administrator will be allowed to log in from and then click the Add button. The physical location of the device, e. When changing your password, enter the old password here. When changing your password, enter the new password here. the password is case-sensitive. A different character than a. The length should be between 0 and 12 characters. Enter the new password a second time for confirmation purposes. New Password: Confirm Password: D-Link DAP-2310 User Manual 63 Section 3 - Configuration Console Settings Each of the five main categories display various hidden administrator parameters and settings. status: Status is enabled by default. Uncheck the box to disable the console. Select the type of protocol you would like to use, Telnet or SSH. Status: Check the box to enable the SNMP functions. A Firmware upgrade is a function that upgrade the running software used by the access point. This is a useful feature that prevents future bugs and allows for new features to be added to this product.

Please go to your local D-Link website to see if there is a newer version firmware available. upload Firmware The current firmware version is displayed From Local Hard above the file location field. After downloading Drive: the most recent version of firmware for the DAP-2310 from <http://support.dlink.com>. Com to your local computer, use the Browse button to locate the firmware file on your computer. click Upload to update the firmware version.

Please don't turn the power off while upgrading. Language Pack You may load a language pack to display the Upgrade: utility in another language. Click Browse to locate the language pack file on your local computer. After selecting and opening the file, click Upload to upload the file to the DAP-2310. Upload SSL Certification From Local Hard Drive: Click Browse to locate the SSL Certification file on your local computer. After selecting and opening the file, click Upload to upload the file to the DAP-2310. D-Link DAP-2310 User Manual 66 Section 3 - Configuration Configuration File Upload Upload File: Click the Browse button to locate a previously saved configuration file on your local computer. After selecting the file, click Upload to apply the configuration settings to the DAP-2310. Click Download to save the current DAP-2310 configuration to your local computer.

Note that if you save one configuration with the administrator's password now, after resetting your DAP-2310, and then updating to this saved configuration file, the password will be gone. Download Configuration File: D-Link DAP-2310 User Manual 67 Section 3 - Configuration Time and Date Current Time: Enable NTP Server: NTP Server: Time Zone: Enable Daylight Saving: Daylight Saving Dates: Set the Date and Time Manually: Displays the current time and date settings. Check to enable the AP to get system time from an NTP server. enter the NTP server URL or IP address. Use the drop-down menu to select your correct Time Zone.

check the box to Enable Daylight Saving Time. Use the drop-down menu to select the correct Daylight Saving offset. You can either manually set the time for your AP here, or you can click the Copy Your Computer's Time Settings button to copy the time from the computer you are using (Make sure that the computer's time is set correctly). D-Link DAP-2310 User Manual 68 Section 3 - Configuration System Settings Restart the Device: Restore to Factory Default Settings: Clear Language Pack: Click Restart to restart the DAP-2310. Click Restore to restore the DAP-2310 back to factory default settings. Click Clear to remove any loaded language packs. System D-Link DAP-2310 User Manual 69 Section 3 - Configuration Help Help: Scroll down the Help page for topics and explanations. D-Link DAP-2310 User Manual 70 Section 6 - Troubleshooting This chapter provides solutions to problems that can occur during the installation and operation of the DAP-2310. Read the following descriptions if you are having problems. (The examples below are illustrated in Windows XP.

If you have a different operating system, the screenshots on your computer will look similar to the following examples.) 1. Why can't I access the web-based configuration utility? When entering the IP address of the D-Link access point (192. 50 for example), you are not connecting to a website on the Internet nor do you have to be connected to the Internet. The device has the utility built-in to a ROM chip in the device itself. Your computer must be on the same IP subnet to connect to the web-based utility. 0 and higher ¶ Verify physical connectivity by checking for solid link lights on the device. If you do not get a solid link light, try using a different cable or connect to a different port on the device if possible. If the computer is turned off, the link light may not be on. ¶ Disable any internet security software running on the computer.

Software firewalls such as Zone Alarm, Black Ice, Sygate, Norton Personal Firewall, and Windows XP firewall may block access to the configuration pages. Check the help files included with your firewall software for more information on disabling or configuring it. @@@@ click the LAN Settings button. Make sure nothing is checked. click OK.

@@@ This should open the login page for your the web management. ¶ If you still cannot access the configuration, unplug the power to the access point for 10 seconds and plug back in. Wait about 30 seconds and try accessing the configuration. If you have multiple computers, try connecting using a different computer. 2.

What can I do if I forgot my password? If you forgot your password, you must reset your access point. Unfortunately, this process will change all your settings back to the factory defaults. To reset the access point, locate the reset button (hole) on the rear panel of the unit. With the access point powered on, use a paperclip to hold the button down for 10 seconds. Release the button and the access point will go through its reboot process. Wait about 30 seconds to access the access point. The default IP address is 192. When logging in, the username is admin and leave the password box empty. D-Link DAP-2310 User Manual 72 Appendix B - Networking Basics Networking Basics Check your IP address After you install your network adapter, by default, the TCP/IP settings should be set to obtain an IP address from a DHCP server (i. To verify your IP address, please follow the steps below.

click on Start > Run. In the run box type cmd and click OK. At the prompt, type ipconfig and press Enter. This will display the IP address, subnet mask, and the default gateway of your adapter. 0, check your adapter installation, security settings, and the settings on your router. Some firewall software programs may block a DHCP request on newly installed adapters. Hotel, coffee shop, airport), please contact an employee or administrator to verify their wireless network settings. D-Link DAP-2310 User Manual 73 Appendix B - Networking Basics Statically Assign an IP address If you are not using a DHCP capable gateway/router, or you need to assign a static IP address, please follow the steps below: Step 1 Windows XP 2000: Click on Start > Settings > Control Panel > Network Connections Windows XP: Click on Start > Control Panel > Network Connections Windows Vista: Click on Start > Control Panel > Network and Internet > Network and Sharing Center > Manage network connections Step 2 Right-click on the Local Area Connection which represents your network adapter and select Properties. step 3 Highlight Internet Protocol (TCP/IP) and click Properties. Step 4 Click Use the following IP address and enter an IP address that is on the same subnet as your network or the LAN IP address on your router.

Example: If the router's LAN IP address is 192. 1, make your IP address 192. X where X is a number between 2 and 99. Make sure that the number you choose is not in use on the network. Set Default Gateway the same as the LAN IP address of your router (192.

D-Link DAP-2310 User Manual 74 Appendix B - Networking Basics Set Primary DNS the same as the LAN IP address of your router (192. The Secondary DNS is not needed or you may enter a DNS server from your ISP. Step 5 Click OK twice to save your settings. 9W with PoE*** ¶ WPA2 Personal/Enterprise * aximum wireless signal rate derived from IEEE Standard 802.
