Honeywell

XE70 SERIES

T6374/T6375
FAN-COIL THERMOSTATS
4-PIPE FAN-COIL CONTROL

PRODUCT SPECIFICATION SHEET

The T6374 and T6375 are designed to control the valves, or the valves and the fan in 4-pipe fan-coil applications, with the possibility of also being used for control of split units and small air conditioners.

The thermostat operates the on/off valves to provide control at the desired setpoint temperature.

The fan can also be controlled from the thermostat. It is wired to run continuously, and can be switched off with the system ON/OFF switch.

Versions are available with a manual 3-SPEED FAN switch, and with a system ON/OFF switch.

Heat/cool changeover operation is also possible on some versions. This function can be accomplished by a manually operated HEAT/COOL switch on the front of the thermostat, or in some versions, automatically by means of a fixed deadband built into the thermostat between the heating and cooling setpoints.

FEATURES

- Dual diaphragm sensing element ensures close temperature control for all loads and applications
- Attractive modern styling makes this thermostat ideal for locating in the occupied space, particularly in offices or hotels
- Versions with heat anticipator, which improves temperature control in both heating and cooling operation
- Thermostat mounts directly onto a wall or conduit box
- Slide switches allow manual control of system operation and fan speed
- Versions available with fixed deadband between heating and cooling operation
- Optional extras available are :
 - range stops F42005646-001
 - tamper proof cover F42008488-001 (opaque), F42008489-002 (transparent)
