print cartridge recovery Customers interested in recycling their genuine HP print cartridges can participate in HP's empty print cartridge return and recycle program. HP offers this program in more countries/regions than any other print cartridge manufacturer in the world. This program is provided as a free service to HP customers as an environmentally sound solution for these products at end-of-life. It is not available in all countries/regions. To participate, simply request postage-paid return envelopes or bulk boxes via the Web at www.hp.com/recycle. Because HP's unique recycling processes are very sensitive to material contamination, we cannot take back and recycle cartridges from other manufacturers.

The end products of the recycling process are used in the manufacture of new products, and HP must ensure the composition of the material is consistent. To do that, we recycle only HP original cartridges. This program does not extend to refilled cartridges. Returned cartridges are separated for purification into raw materials for use in other industries to manufacture new products. Examples of products made from recycled HP print cartridge materials include automobile parts, trays used in microchip fabrication processes, copper wire, steel plates, and the precious materials used in electronics. Depending on the model, HP is able to recycle up to 65% of the print cartridge by weight. The remaining parts that cannot be recycled (ink, foam, and composite parts) are disposed of in an environmentally responsible manner. maintaining print cartridges The following tips will help maintain HP print cartridges and ensure consistent print quality: q Keep all print cartridges in their sealed packages until they are needed. Print cartridges should be stored at room temperatures (15-35 degrees C or 59-95 degrees F). Do not remove the plastic tape covering the ink nozzles until you are ready to install the print cartridge in the printer. If the plastic tape has been removed from the print cartridge, do not attempt to reattach it. Reattaching the tape damages the print cartridge. q USB The printer connects to the computer with a Universal Serial Bus (USB) cable. The computer must be running Windows 98 or later to use a USB cable. For instructions on connecting the printer with a USB cable, see the setup poster that came with the printer.
