**Manual abstract:**

**IMPORTANT:** This cutting machine is capable of amputating hands and feet and throwing objects. Failure to observe the following safety instructions could result in serious injury or death. Be familiar with the controls and the proper use of the equipment. @@Local regulations may restrict the age of the operator. Never mow while people, especially children, or pets are nearby. @@While mowing, always wear substantial footwear and long trousers. Do not operate the equipment when barefoot or wearing open sandals. @@- Refuel outdoors only and do not smoke while refueling. - Add fuel before starting the engine. Never remove the cap of the fuel tank or add petrol while the engine is running or when the engine is hot.

- If petrol is spilled, do not attempt to start the engine but move the machine away from the area of spillage and avoid creating any source of ignition until petrol vapors have dissipated. Before using, always visually inspect to see that the blades, blade bolts and cutter assembly are not worn or damaged. replace worn or damaged blades and bolts in sets to preserve balance. On multi-bladed machines, take care as rotating one blade can cause other blades to rotate.

Do not operate the engine in a confined space where dangerous carbon monoxide fumes can collect.

Mow only in daylight or in good artificial light. avoid operating the equipment in wet grass , where feasible. Always be sure of your footing on slopes. Walk, never run. For wheeled rotary machines, mow across the face of slopes, never up and down.

Use extreme caution when reversing or pulling the lawnmower towards you. â· Stop the blade if the lawnmower has to be tilted for transportation when crossing surfaces other than grass, and when transporting the lawnmower to and from the area to be mowed. @@Do not change the engine governor settings or overspeed the engine. @@ disengage all blade and drive clutches before starting the engine. @@@@Do not put hands or feet near or under rotating parts. Keep clear of the discharge opening at all times. Never pick up or carry lawnmower while the engine is running. @@@@ go slow when using a trailing seat. @@@@Allow the engine to cool before storing in any enclosure. @@If the fuel tank has to be drained, this should be done outdoors.

@@Learn and understand their meaning. Position guard as shown and secure with fasteners supplied. NOTE: The foot guard must be installed for the safe operation of this machine. Put grass catcher frame into grass bag with stiff part of bag on the bottom. slip vinyl bindings over frame. The grass catcher is secured to the lawn mower housing when the rear door is lowered onto the grass catcher frame. Do not drag the bag when emptying, it will cause unnecessary wear. The mower can be set to different cutting levels. Adjust to desired cutting level by means of the lever at each wheel. Move the lever towards the wheel and set the cutting level.

The handle can be set to different levels. Fill the engine with engine oil. Fill the tank with petrol, not oil-blended. Both lead-free and lead-containing petrol may be used. Do not fill with petrol while the engine is running.

Hold engine brake yoke to the handle and pull on starter handle quickly. To "STOP" engine, release engine brake yoke. Forward drive is engaged (1) and disengaged (2) with the clutch bar at the top of the handle. Select ground speed with gear shift lever (3). The farther toward the handle the lever is pulled, the faster the unit will travel.

The mower should not be used on ground that slopes more than 15°. This could cause engine lubrication problems. @@Mow the lawn twice weekly during the most active periods of growth. @@Mow with a high cutting height setting the first time. examine the result and lower the mower to the desired setting.

Mow slowly or mow the grass twice if it is very long. @@After 5 hours running time, tighten screws and nuts. check the oil. The spark plug must be at the highest point on the mower when it is tilted up. The level should be between FULL and ADD.

Avoid filling with too much oil. Tighten the screw properly when reassembling. Change oil after each season or after 25 hours running time. Run the engine warm, remove the spark plug lead. Remove the drain plug from bottom of engine and drain oil. Fill with new oil. Over time, ground speed may decrease. Ground speed should increase. If ground speed remains the same, drive belt is worn and should be replaced. Before public transporting, engine oil and petrol must be removed.
