Manual abstract:

This applies as much to workgroups in accounting, controlling and personnel departments as to teams in logistics and warehousing. Offering great communication and networking capabilities, the bizhub 222/282/362 are truly efficient printers and copiers that provide all the answers to the most diverse needs. @@@@@@They support all customary operating systems with standard PCL 6 and PostScript 3 capabilities. Thanks to a standard 192 MB memory that can be upgraded to max. 320 MB, their printing and copying functionality is comprehensive and versatile and includes convenient functions like mixplex, n-up, and more. The optional 40 GB hard disc increases the page storage capacity further and makes available additional features, such as watermark and stamp printing as well as overlay. Versatile finishing choices Also impressive are the bizhub 222/282/362's finishing capabilities: the prints from several users are reliably separated in the different bins of the practical mailbin sorter. The staple finisher is not only convenient for multi-position stapling but can be extended with several options. Hole-punched and stapled reports can be produced just as easily as complete, centre-stapled and folded brochures and a variety of other professional print formats. True media flexibility The bizhub 222/282/362 supports paper sizes from A6 to A3 as well as a wide selection of media, covering paper weights from 50 to 210 gsm (via the bypass).

Increasing convenience and offering the possibility of higher throughput, the bizhub 222/282/362 allow refilling of paper and toner on the fly which completely avoids any interruption to longer print runs and extensive jobs. The standard paper capacity of 1,150 sheets can be extended to a generous 3,650 sheets, again supporting smooth operation and enhancing the overall throughput. Configurations Eco-friendly quality Konica Minolta has applied its Simitri® extra fine polymerised toner also to the bizhub 222/282/362. Simitri® toner guarantees an excellent image quality with superior halftone definition and solid fills. @@@@@@@@@@@@@@@@@@@@@@@@@@@Automatic eMail notifications alert users to the status of each device, so that any problem can be dealt with immediately, jobs are processed without delay and the up-time of all monitored equipment is maximised.

n The PageScope Data Administrator makes the integration of new equipment into existing workflows and the programming of eMail addresses fast and simple. Authentication and account data can be individually programmed per user, including the allocation of limited print and copy volumes. n Essential security features With secure printing, the user has to enter a password directly at the bizhub 222/282/362 before their print job is produced. This avoids confidential information being left lying around and possibly falling into the wrong hands. n Password protection is available for the internal hard disc of the system, effectively preventing the reading-out of or tampering with the HDD and its contents by anyone who is not authorised to do so.

n HDD data erasure safeguards all information ever stored on the internal hard disc. Various erasure methods are used to overwrite temporary data as well as previously stored data. Additionally all data can be erased when the HDD is disposed of. @@@@@@40GB,Scan-to-Box/HDD/TWAIN,overlay,etc. 32/64/128MB Localprinting HDDdataencryption Finishing options corner stapling 2-point stapling four-hole punching duplex combined mixplex/ mixmedia offset sorting criss-cross sorting booklet = Either saddle kit SD-507 or Mail-bin unit MT-502 can be installed to the FS-530 at the same time.
