The advertisement features the Konica Minolta logo at the top left and the slogan "The essentials of imaging" at the top right. The central image shows a man in a blue shirt standing next to a large, modular office machine in a warehouse-like setting with blue shelving units. The machine is the bizhub PRO 1200 series. Below the image, the text reads "bizhub PRO 1200 series" and "The genius in quality and modularity". At the bottom left is the "scale up" logo, and at the bottom right is the text "Production systems bizhub PRO 1051/1200/1200P".

Manual abstract:

In the bizhub PRO 1200 series, Konica Minolta has combined these important assets with a truly amazing black & white print quality that sets a new industry standard, surpassing anything previously achieved. Its alternative use as a post insertion unit boosts flexibility. Such amazing finishing versatility speeds up production and enhances the overall performance, increasing throughput, turnover and ultimately profit. Konica Minolta has equipped the new bizhub PRO 1200 series with an array of advanced technologies that make production environments economically efficient and fit for the future by satisfying highest demands on quality, performance and reliability for years to come. bizhub PRO 1051/1200/1200P, production systems Technology and quality: state-of-the-art The bizhub PRO 1200 series produces an image quality that is quite simply brilliant and goes beyond anything ever before achieved with a black and white production system. Outstanding black coverage as well as amazingly smooth gradations and halftones characterise the prints. All three systems, the bizhub 1200, the bizhub PRO 1200P and the bizhub PRO 1051, impress with the finest line reproduction in the industry and excel with an absolutely constant and stable print quality even in extensive print cycles. The advanced properties of Konica Minolta's Simitri® polymerised toner further contribute to this matchless quality. With this comprehensive functionality the operator gains complete control for flexible optimisation of the print quality. No less important, Konica Minolta's proprietary Simitri® toner is another element to guarantee an excellent image quality.

Simitri® ensures superior halftone definition and solid fills. Its minuscule toner particles provide clarity and definition to every tiny detail in the printed image. Thanks to the innovative transfer belt technology, the toner image is brought onto the paper with less diffusion than ever, achieving the highest precision yet. This is beneficial in particular to the important front-to-back registration, which boasts a further improved accuracy. A newly adopted CIE functionality improves the reproduction of colour-based documents whenever required.

RGB colour data are transposed to the CIE colour space, providing grey gradations with much more differentiation than when printing colour data without transformation. bizhub PRO 1051/1200/1200P, production systems Flexibility & operation with total efficiency The bizhub PRO 1200 series excels with a truly outstanding RIP and print performance that helps commercial printers and print providers keep up continuous production. The extensive range of system configurations ensures utmost versatility for the production of individual, highly attractive print formats that satisfy even the most demanding customers. Despite such overwhelming flexibility the systems are surprisingly simple to operate and feature a highly convenient job queue management. The intelligent paper catalogue functionality is a further important capability for maximised operation.

Highest modularity The unmatched modularity of the bizhub PRO 1200 series enables virtually unlimited configurations. With more than 40 different system versions, almost any imaginable combination is possible, providing complete customisation and answering the most specific customer demands. Impressive performance & absolute reliability At the heart of the bizhub PRO 1200 series, a new ultra high-end RIP provides a print performance that is simply mind-boggling in its speed and power. 8 paper magazines and the high-capacity consumables yields. Icon-based GUIs make Printgroove JT intuitive and easy to use. up to 5,000 (PF-703) sheets and enable the processing of media between 40 and 350 gsm. All paper sizes can be fed from all trays. The PF-703 incorporates vacuum feed technology and can also be mounted as a post insertion unit (PI-PFU) for large-capacity feeding of preprinted (e.g. colour) materials.
