Manual abstract:

Merge 2 x 2 can be used whenever you have two MIDI signals that need to go to the same destination. Also, if you find that your MIDI system has had a "nervous breakdown," the 2 x 2 has a built-in "panic button" feature. Merge 2 x 2 draws power directly from the MIDI Out of any instrument or sequencer connected to either of its MIDI Ins -- so it needs no external power supply. The instrument that is connected to the Merge 2 x 2's MIDI In must be turned On in order for the 2 x 2 to receive power. When this is done, the red power LED will light. IMPORTANT: Merge 2x2 takes 2 or 3 seconds to power-up after active MIDI is connected to either of its MIDI Ins. During this brief power-up time the Merge 2x2 will not merge. To use Merge 2 x 2, connect the MIDI Outs of the instruments or sequencers you wish to merge to the 2 x 2's MIDI Ins. @@@@This can only happen if the instrument draws more power than allowed in the MIDI specification. If you encounter this situation, there is a standard 9-volt, center pin positive, power jack on the side of Merge 2 x 2.

You can go to your local electronics store and buy a universal power adapter or call MIDIMAN to purchase one directly.
