First AMD PC with 12 months image stability

New components often require changes to the software and driver images - and thus produce high follow-on costs. MAXDATA solves this challenge with the FAVORIT STABLE A. The PC system that is based on the NVIDIA Business Platform™ and AMD processors guarantees platform stability for 12 months.

As Europe's largest manufacturer MAXDATA provides users with the option of using AMD processors in IT environments with complete equal images for this system. The new platform provides the perfect symbiosis of excellent NVIDIA graphics and secure, innovative AMD processors - it goes without saying that standard security features and effective power consumption come as standard. The Cool'n'Quiet™ technology adapts the device's output to current needs, which lowers power consumption and heat development. In addition the AMD Athlon™ 64 X2 dual core processor is also perfectly suited for handling several applications at the same time - and thus meets the requirement for highly efficient work.

Key features:

- Guaranteed image stability
- High performance thanks to the new dual-core technology
- A secure investment as a result of flexible expansion options

Application areas:

Professional users in any size of company with the highest demands on performance and stability for the software and driver images.

MAXDATA UK Limited, The MAXDATA Centre, Downmill Road, Bracknell, Berkshire, RG12 1DS, UK, www.mxddata.co.uk

MAXDATA: Environmentally friendly and secure technology
