MAXDATA FORTUNE 4000 I

Home PC for Multimedia Applications
Delivering High-end 3D Performance

The FORTUNE 4000 I offers demanding users who also expect the best performance from their home PC mixture, powerful technology and comprehensive features.

Both make it the ideal partner for all multimedia applications and 3D games. Its PCI Express graphics card, 512 MB dual channel DDR2 memory and i945G chipset ensure that this is the case. Such powerful home PC performance is largely the result of the current Intel® Pentium® 4 processor 650, which supports hyper-threading technology and up to 25% better performance than traditional processors. In addition a 2 MB L2 cache makes the processor even more effective for applications handling such tasks as digital image processing, music, video and games. Intel® extended memory 64 technology provides a high level of investment security even for home PCs. Support for both 32 bit and 64 bit therefore makes the FORTUNE 4000 I a sound investment for the future. And thanks to Intel SpeedStep®

technology, the attractively and ergonomically-designed PC tower is quiet and energy efficient.

Highlights:

- High-end multimedia features
- Maximum performance
- Attractive micro-tower design.

Application Areas:

The FORTUNE 4000 I is designed for ambitious home use. The attractively designed PC sports a multitude of features and will no doubt win over users through its high performance for multimedia applications and games.

MAXDATA UK Limited, The MAXDATA Centre, Downmill Road, Bracknell, Berkshire, RG12 1QS, UK, www.maxdata.com

MAXDATA: Empowering networks, enhancing information resources.
