

Your PDF Guides

You can read the recommendations in the user guide, the technical guide or the installation guide for PHILIPS 40PFS5709/12. You'll find the answers to all your questions on the PHILIPS 40PFS5709/12 in the user manual (information, specifications, safety advice, size, accessories, etc.). Detailed instructions for use are in the User's Guide.

Manual abstract:

4 Open source license Acknowledgements and License Texts for any open source software used in this Philips TV. This is a document describing the distribution of the source code used on the Philips TV, which fall either under the GNU General Public License (the GPL), or the GNU Lesser General Public License (the LGPL), or any other open source license. Instructions to obtain source code for this software can be found in the user manual. PHILIPS MAKES NO WARRANTIES WHATSOEVER, EITHER EXPRESS OR IMPLIED, INCLUDING ANY WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, REGARDING THIS SOFTWARE. Philips offers no support for this software. The preceding does not affect your warranties and statutory rights regarding any Philips product(s) you purchased. It only applies to this source code made available to you. 3) FreeType is a software font engine that is designed to be small, efficient, highly customizable, and portable while capable of producing high-quality output (glyph images). This piece of software is made available under the terms and conditions of the FreeType Project license, which can be found below. This piece of software is made available under the terms and conditions of the zlib license, which can be found below.

This piece of software is made available under the terms and conditions of the ICU license, which can be found below. This piece of software is made available under the terms and conditions of the libpng license, which can be found below. @@@@MNG is the animation extension to the popular PNG image-format. @4) Used by boot loader and only linked with boot loader, GPL license. @@This piece of software is made available under the terms and conditions of the Libcurl license, which can be found below.

This piece of software is made available under the terms and conditions of the c-ares license, which can be found below. The core library (written in the C programming language) implements the basic cryptographic functions and provides various utility functions. Wrappers allowing the use of the OpenSSL library in a variety of computer languages are available. This piece of software is made available under the terms and conditions of the 1. 7.

4 license, which can be found below. It is a stream-oriented parser in which an application registers handlers for things the parser might find in the XML document (like start tags). an introductory article on using. This piece of software is made available under the terms and conditions of the Expat license, which can be found below. This piece of software is made available under the terms and conditions of the DirectFB license, which can be found below.

SquashFS compresses files, inodes and directories, and supports block sizes up to 1 MB for greater compression. 0) The Linux kernel is an operating system kernel used by the Linux family of Unix-like operating systems. This piece of software is made available under the terms and conditions of the Linux Kernel license, which can be found below. This piece of software is made available under the terms and conditions of the SQLite license, which can be found below. SquashFS compresses files, inodes and directories, and supports block sizes up to 1 MB for greater compression.

4) SquashFS is a compressed read-only file system for Linux. This piece of software is made available under the terms and conditions of the SquashFS license, which can be found below. 1) Any Unix-like operating system needs a C library: the library which defines the "system calls" and other basic facilities such as open, malloc, printf, exit. The GNU C library is used as the C library in the GNU system and most systems with the Linux kernel This piece of software is made available under the terms and conditions of the glibc license, which can be found below. Org/software/libc/ mtd-utils (1) The aim of the system is to make it simple to provide a driver for new hardware, by providing a generic interface between the hardware drivers and the upper layers of the system.

Hardware drivers need to know nothing about the storage formats used, such as FTL, FFS2, etc. , but will only need to provide simple routines for read, write and erase. Presentation of the device's contents to the user in an appropriate form will be handled by the upper layers of the system. This piece of software is made available under the terms and conditions of the mtd-utils license, which can be found below. 6) This is the home of libusb, a library that gives user level applications uniform access to USB devices across many different operating systems.

Many participants in the libusb community have helped and continue to help with ideas, implementation, support and improvements for libusb. This piece of software is made available under the terms and conditions of the libusb license, which can be found below. 3) Library to enable user space application programs to communicate with USB devices. @@@@The supplier for these tools is Atheros. @@@@ .

@@@In addition, most sh scripts can be run by Bash without modification. @@These are the core utilities which are expected to exist on every operating system. 31) The GNU Find Utilities are the basic directory searching utilities of the GNU operating system. These programs are typically used in conjunction with other programs to provide modular and powerful directory search and file locating capabilities to other commands. 5) If you are like many computer users, you would frequently like to make changes in various text files wherever certain patterns appear, or extract data from parts of certain lines while discarding the rest.

To write a program to do this in a language such as C or Pascal is a time-consuming inconvenience that may take many lines of 103 code. The job is easy with awk, especially the GNU implementation: gawk. 1a) The grep command searches one or more input files for lines containing a match to a specified pattern. 12) GNU Gzip is a popular data compression program originally written by Jean-loup Gailly for the GNU project. 12) Provides developer documentation for the utilities used by Linux systems to load and manage kernel modules (commonly referred to as "drivers"). Package is a collection of programs for controlling the network subsystem of the Linux kernel. 8) procs is the package that has a bunch of small useful utilities that give information about processes using the /proc filesystem. The package includes the programs ps, top, vmstat, w, kill, free, slabtop, and skill. 13) This PSmisc package is a set of some small useful utilities that use the proc filesystem. We're not about changing the world, but providing the system administrator with some help in common tasks.

Instead, it is used to filter text, i. e. , it takes text input, performs some operation (or set of operations) on it, and outputs the modified text. Sed is typically used for extracting part of a file using pattern matching or substituting multiple occurrences of a string within a file.

17) GNU Tar provides the ability to create tar archives, as well as various other kinds of manipulation. 8) The "libxml2" library is used in AstroTV as a support for the execution of NCL application. 2) GNU Wget is a free software package for retrieving files using HTTP, HTTPS and FTP, the most widely-used Internet protocols. It is a non-interactive commandline tool, so it may easily be called from scripts, cron jobs, terminals without X-Windows support, etc. They use a textual interface and are rather crude, but aim to support the full Wireless Extension. Gz) GNU libmicrohttpd is a small C library that is supposed to make it easy to run an HTTP server as part of another application.

The original download site for this software is : <http://www.gnu.org/software/libmicrohttpd/> This piece of software is made available under the terms and conditions of the LGPL v2. Gz) YAJL is a small event-driven (SAX-style) JSON parser written in ANSI C, and a small validating JSON generator. yAJL is released under the ISC license.

The original download site for this software is : <http://lloyd.github.io/> Part of the software embedded in this product is gSOAP software. Portions created by gSOAP are Copyright 2000-2011 Robert A. Adams with any MAC, it may be used to simultaneously verify both the data integrity and the authentication of a message.

Any cryptographic hash function, such as MD5 or SHA-1, may be used in the calculation of an HMAC; the resulting MAC algorithm is termed HMAC-MD5 or HMAC-SHA1 accordingly. *κοντομωυο*) Non-contractual images / Images non contractuelles / Außervertragliche Bilder Specifications are subject to change without notice.
