**General Description**

Scratch LIVE is the ultimate software and hardware solution for bridging the analog world of vinyl and the digital world of computer audio files. Using regular turntables or CD players, you can scratch and mix files from your Mac or Windows XP computer's CD or hard drive, add in a live mic input for scratching and even bypass to standard vinyl if you wish. Scratch LIVE is the complete digital solution for the vinyl junkie — take your entire collection wherever you go and leave your precious vinyl at home!

The SL 1 USB interface connects one or two standard vinyl or CD turntables to your computer. This extremely rugged, portable, high quality, bus-powered USB interface features two switchable phono or line inputs, a microphone input, two line outputs, and pass thru outputs for the phono/line and mic.

The included 12" vinyl records each have Serato's exclusive and unique control signal which allows Scratch LIVE to track the motion of the record, simulating the same movement with digital audio. Due to Serato's proprietary control scheme, the result is a feel and sound indistinguishable from playing vinyl. As a producer and DJ, the track you finished today can be played on a real turntable tonight. You'll never have to cut a dubplate again!
