LNB Power: Enables or disables the power supply for the LNB. **Satellite:** Selects the satellite for receiving digital broadcasts. **Transponder:** Selects a transponder from the list or adds a new transponder. **DiSeqC Mode:** Selects DiSeqC mode for the selected LNB. **Lower LNB Oscillators:** Sets the LNB oscillators to a lower frequency. **Upper LNB Oscillators:** Sets the LNB oscillators to a higher frequency. **Tone 22 kHz:** Selects the Tone 22 kHz depending on the LNB type. For a universal LNB it should be Auto. **Positioner Type:** Sets the positioned type between DiSeqC 1.

2 and USALS (Universal Satellite Automatic Location System). **My Longitude:** Sets the longitude for my location. **My Latitude:** Sets the latitude for my location. **Satellite Longitude Settings:** Sets the longitude of user defined satellites. **English User Mode:** Sets the position of satellite aerial according to each satellite.

If you store the current position of satellite aerial according to a certain satellite, when the signal of that satellite is needed, the satellite aerial can be moved to pre-populated position. **Satellite:** Selects the satellite to set the position for. **Transponder:** Selects a transponder from the list for signal reception. **Moving Mode:** Selects the movement mode between discrete and continuous movement. **Step Size:** Adjusts the step size degrees for the aerial rotation.

it is available when Moving Mode is set to Step. **English Go To Stored Position:** Rotates the aerial to the stored satellite position. **Aerial Position:** Adjusts and stores the aerial position for the selected satellite. **English Installer Mode:** Sets limits to the scope of movement of satellite aerial or reset the position. **Store Current Position:** Stores the current position as the selected positioner Limit. **Go to zero:** Moves the aerial to the reference position. **Reset positioner limit:** Allows the aerial to rotate over the full arc. **Reset all settings:** All satellite settings will be reset to the initial values. **Limit Position:** Selects the direction of the positioner Limit. **Aerial Position:** Adjusts and stores the aerial position for the selected satellite. **English Using the Wired Network for LED 5 series (UK only):** **Wired Network Connection:** You can attach your TV to your LAN using cable in three ways: **Connecting the LAN port on your TV to an external modem:** **Connecting the LAN port on your TV to a IP Sharer which is connected to an external modem:** **Connecting the LAN port on your TV directly to a network wall outlet:** **NN To use this way, wall outlet is attached to a modem or router elsewhere in your house.**

NN For detailed settings for wired network connection, refer to the User Manual. **English:** If your network requires a Dynamic IP address, you should use an ADSL modem or router that supports Dynamic Host Configuration Protocol (DHCP). Modems and routers that support DHCP automatically provide the IP address, subnet mask, gateway, and DNS values your TV needs to access the Internet so you do not have to enter them manually. Most home networks use a Dynamic IP address. some networks require a Static IP address. If your network requires a Static IP address, you must enter the IP address, subnet mask, gateway, and DNS values manually on your TV's Cable Setup Screen when you set up the network connection. To get the IP address, subnet mask, gateway, and DNS values, contact your Internet Service Provider (ISP). If you have a Windows computer, you can also get these values through your computer. **ADSL modems that support DHCP also let you use Static IP addresses.** **You can check the connected status on the screen.**

English NN If you cannot find network connection values or if you want to set connection manually: 1. select the IP Settings on Network Status screen. **NN When it fails to connect the network automatically, the IP Settings is available to select. Move to each field using arrow buttons. Enter the network connection values, and then select OK.**

English The check list for wired network connection failure When wired network connection failed, try to apply the following information to each issue. **If it is connected, make sure that the router is turned on; if it is on, try turning it off and on again. Try the following to set your IP address automatically or set your IP address manually by selecting IP Settings.** **Ensure DHCP server is enabled on router and unplug and re-plug-in the router.** **Contact your Internet Service Provider for more information.**

English Issues Unable to connect to the network. Connected to your local network, but cannot connect to the Internet. Solutions and Explanations **Check if your IP address is set correctly in IP Settings.** **Contact your Internet Service Provider for more information.** **If the problem persists, contact your Internet Service Provider to access the Internet.** **Network setup complete,** **Confirm that your router is connected to the Internet. But cannot connect to the Internet.** **If the problem persists, contact your Internet Service Provider to Internet. access the Internet.** **English If Your TV Fails to Connect to the Internet Your TV may not be able to connect to the Internet because your ISP has permanently registered the MAC address (a unique identifying number) of your PC or modem, which it then authenticates each time you connect to the Internet as a way of preventing unauthorized access. As your TV has a different MAC address, your ISP can not authenticate its MAC address, and your TV can not connect.**

To resolve this problem, ask your ISP about the procedures required to connect devices other than a PC (such as your TV) to the Internet. If your Internet service provider requires an ID or password to connect to the Internet, your TV may not be able to connect to the Internet. If this is the case, you must enter your ID or password when connecting to the Internet. The internet connection may fail because of a firewall problem.
