Subject to availability. Rights of modifications reserved. www.gigaset.com s Be inspired Operating Manual and Safety Precautions ! Brief overview Base station symbol Constant: ready for dialling/receiving calls Flashing: no connection to base station Speed dialling Recall key For PABXs and select carrier services Dial pause Hold down! Handset keys 1234567890 / Accept/end call Dial call number (when digits are already stored) Redial Keypad lock Lock on/off hold down to activate/ deactivate! Memory key For saving For settings Displays d Save n _ u / Base station symbol b Lift handset Special displays * character # character Recall key ~~~~ Keypad lock Handset ready for registration Handset searching for registered base Handset found base that is ready for registration P Pause ~ Memory empty 2 Safety information ! \$ Use only the plug-in power supply unit provided, as indicated on the bottom of the device. Use only approved, rechargeable batteries of the same type. In other words, never use conventional (non-rechargeable) batteries, since these can injure you and damage your health.

< OE Insert rechargeable batteries in accordance with polarity symbols (the instructions are found in the handset battery compartment). Use the batteries indicated in these operating instructions (the instructions are found in the handset's battery compartment). The operation of medical equipment may be affected. Bear in mind the technical requirements of the environment (e.g.

doctor's office). The handset can cause an unpleasant buzzing sound in hearing aids. Do not hold the handset too close to your ear. Do not operate the telephone in environments where there is risk of explosion (e.g. paint shops). Do not install the base station in bathrooms or showers. The handset is not splashproof (see page 13). Do not pass your Gigaset on to a third party without the user guide. Dispose of batteries and your phone in an environment-friendly manner. When the keypad is locked (see page 11) emergency numbers cannot be dialled either. Not all the functions described in this user guide are available in all countries. 3 Putting the telephone into service Step 1: Connecting the base station First of all, connect your base station to the telephone jack and the mains supply. p. k Redialling a number The last call number dialled is saved.

O Dial the call number. Press the handset key. The connection is set up. a 8 Making calls Saving/changing a call number (speed dialling) You can save up to 10 telephone numbers as speed dialling digits and dial them at the push of a button. \C e.g. o \ Press the memory key followed by the speed dialling key. Enter the speed dialling digit (0 to 9). Enter the call number. Save the speed dialling digit.

You will hear the confirmation beep. Speed dialling C Press the speed dialling key. Select the speed dialling digit (0 to 9). Press the handset key. The connection is set up.

e.g. a The speed dialling digit "0" is activated automatically by holding down number with the identification the speed dialling key. We therefore recommend assigning a frequently dialled number to "0" (e.g.

a network access number). Cost-effective telephony You can use the network access numbers of various providers to minimise costs (Call-by-Call*), depends on the offering of the service provider. Like a call number, these numbers can be saved as speed dialling digits (0 to 9). You can, however, also dial the network access or call numbers as usual. · Network access using a speed dialling digit C Hold down the speed dialling key. The speed dial memory location "0" with the network access number is displayed automatically. o a Enter the user's call number and dial the complete number via the handset keypad. * not available in all countries 9 Cost-effective telephoning · "Linking" or chaining of multiple speed dialling digits You can link multiple access numbers and call numbers that have been saved as speed dialling numbers. C e.g.

C Hold down the speed dialling key.

[You're reading an excerpt. Click here to read official SIEMENS](http://yourpdfguides.com/dref/3953960)

[GIGASET A100 user guide](http://yourpdfguides.com/dref/3953960)

<http://yourpdfguides.com/dref/3953960>

Memory location "0" with the network access number is displayed. Press the speed dialling key once more. Select the speed dialling digit (0 to 9) for a user. The network access number and the call number are chained and displayed. Press the handset key. The connection is set up. e.g. 5 a Further access numbers can be saved as speed dialling numbers (0 to 9).

To use them press C and then the relevant speed dialling key. Settings Handset volume You can set the handset volume to any of three levels. \P Activate the function. Change the volume (levels 1 to 3) and save. e.

g. Y\ Ringer volume You have three volumes to choose from. e.g. Y\ \e Activate the function the ringer sounds.

Change the ringer volume (levels 1 to 3) and save. 10 Settings Ringtone You can choose between two ringtones. e.g. Y\ \ Activate the function the ringer sounds. Select the ringtone (version 1 or 2) and save. Keypad lock When the keypad is locked, nothing happens if you inadvertently press a key. You can continue to accept calls in the usual manner. ^ ~~~~ Hold down for more than 1 second to activate/deactivate. The display icon appears if active.

Operating behind a PABX If you operate your Gigaset behind a PABX, it may be necessary to change the preset Dual Tone Multifrequency Dialling (DTMF) procedure and flash times (please refer to the operating instructions of your PABX). Use digits 1 to 4 to set the following: 1 2 3 4 DTMF long flash 250 ms , DTMF short flash 100 ms , DP (Dial Pulsing) 1.5/1 DP 2/1 Press the handset key. Activate the function by entering 10. Enter the desired setting (1 to 4). Save the setting. Press the handset key. \ a e.g. 4 P \ a Did you enter the wrong number by mistake? Then press the handset key a twice or wait until the display returns to standby.

11 Registering the handset manually Handset A1 to an A100 base: Manual registration has to be carried out if automatic registration has not functioned or the original handset supplied has been replaced. Remove the power supply unit (220V/230V) from its socket. \7\ Prepare the handset for registration. Place the handset in the base station and leave it there until registration has been completed. Ö k Make sure the handset is still in the base station.

Now replug the power supply unit into the socket. The handset will now take about 60 seconds searching for a base that is ready for registration. A base that is ready for registration has been found; registration was successful (display appears for about 3 seconds). No base ready for registration has been found (display appears for about 3 seconds). Manual handset registration will overwrite an existing registration.

The search for a base that is ready for registration can be cancelled by pressing the handset key a . 12 Tips Maintenance Simply wipe your telephone with a damp cloth or an antistatic wipe. Never use a dry cloth as this can cause static discharge! Contact with liquid ! If the handset should come into contact with liquid, on no account switch the device on. Remove all batteries immediately. Allow the liquid to drip out of the device, and then dab all parts of the device dry. Keep the handset with the batteries removed in a warm, dray place for at least 72 hours. In many cases, you will then be able to use it again.

Troubleshooting Malfunction Registration did not work. Possible causes The battery is not sufficiently charged. Handset and base station were not prepared for registration.

The battery is not charged. The keypad is locked. Solution Charge the battery for 16 hours (see page 12). Remove and then re-insert the power supply unit. Charge the battery or replace it (see page 7). Press ^ for 1 second. No display. No reaction to keystroke. 13 Malfunction No radio connection to the base station: / icon flashing! Possible causes The handset is outside the base station range. The handset is not registered.

The base station is not active. Solution Move closer to the base station. Register the handset (see page 12). Insert round plug of the mains cable into jack and lay the cable in cable channel (to prevent overtensioning). Plug the power supply unit into the power socket.

Range The range is up to 50 m indoors and approx. 300 m outdoors. The base station symbol flashes when the range is exceeded. / Customer Care You can get assistance easily when you have technical questions or questions about how to use your device by using our online support service on the Internet at: www.my-siemens.com/customer-care

or by referring to the section entitled Questions and answers in this manual (page 13). If the device needs to be repaired, please contact one of our Customer Care Centers: Abu Dhabi.....

· "Chaînage" de préfixes et numéros Si vous avez enregistré plusieurs préfixes et numéros sous des numéros abrégés distincts vous pouvez les associer. A partir du numéro abrégé rapide (mémoire 0): C C p.

ex. 5 Appuyer de façon prolongée sur la touche "Mémoires". Le préfixe enregistré sous le n° abrégé "0" s'affiche. Appuyer de nouveau sur la touche "Mémoires". Sélectionner le numéro abrégé (0 à 9) correspondant à un abonné.

Le préfixe et le numéro sont chaînés et affichés. Appuyer sur la touche "Combiné". La communication est établie. a Vous pouvez mémoriser d'autres préfixes en tant que numéros abrégés sous les touches 1 à 9. Pour les utiliser, appuyer brièvement sur la touche C puis sur la touche correspondante (1 à 9) et poursuivre le chaînage comme ci-dessus.

10 Réglages Volume de l'écouteur du combiné Vous avez le choix entre trois volumes pour l'écouteur du combiné. \P Y\ p. ex. Activer la fonction. Modifier le volume (niveau 1 à 3) et enregistrer. Volume de la sonnerie Vous avez le choix entre trois volumes de sonnerie, tous crescendo. \ç p. ex. Activer la fonction la sonnerie est diffusée. Modifier le volume de la sonnerie (niveau 1 à 3) et enregistrer.

Y\ Mélodie de la sonnerie Vous avez le choix entre deux mélodies pour la sonnerie. \´ Y\ p. ex. Activer la fonction la sonnerie est diffusée. Sélectionner la mélodie de la sonnerie (variante 1 ou 2) et enregistrer. Protection du clavier Cette protection permet d'éviter toute manipulation involontaire des touches. Vous pouvez toutefois prendre un appel comme d'habitude. ° ~~~~ Pour activer/désactiver appuyer durant plus de 1 seconde. Lorsque la protection est activée, le symbole ci-contre s'affiche. 11 Réglages Installation derrière un autocommutateur privé Si vous utilisez votre Gigaset derrière un autocommutateur privé, il peut être nécessaire de régler un mode de numérotation différent du mode FV et du flashing paramétrés par défaut (voir le mode d'emploi de votre autocommutateur).

Les chiffres 1 à 4 correspondent aux réglages suivants. 1 2 3 4 FV, flashing long 250 ms (valeur par défaut) FV, flashing court 100 ms DC (numérotation décimale) 1.5/1 DC 2/1 Appuyer sur la touche "Combiné". Pour activer la fonction sélectionner 10. Sélectionner le réglage souhaité (1 à 4). a p. ex. \P 4\ Enregistrer le réglage. Appuyer sur la touche "Combiné". a Vous avez fait une erreur ? Appuyez 2 x sur la touche "Combiné" a ou bien attendez que l'afficheur revienne de lui-même à l'état de base.

12 Déclarer le combiné manuellement Placer le combiné A1 sur la base du A100 Une déclaration manuelle est utile lorsque, · la déclaration automatique n'a pas fonctionné, · le combiné fourni a été échangé. Retirez le bloc-secteur (220V/230V) de la prise électrique. \7\ Préparez le combiné pour le déclarer. Placez le combiné dans la base et laissez l'y jusqu'à ce que la déclaration soit terminée. k Ö Veillez à ce que le combiné se trouve bien sur la base. Placez à présent le bloc-secteur de nouveau dans la prise électrique. Le combiné recherche pendant env. 60 secondes une base prête pour la déclaration. Une base prête pour la déclaration a été trouvée, la déclaration a été effectuée avec succès (l'affichage apparaît pendant env. 3 secondes).

Aucune base prête pour la déclaration n'a été trouvée (l'affichage apparaît pendant env. 3 secondes). · La base A100 est mono combiné et ne peut avoir qu'un seul combiné déclaré à la fois. · La déclaration manuelle d'un combiné écrase une déclaration existante. · La recherche d'une base prête pour la déclaration peut être interrompue à l'aide de la touche Combiné. 13 Conseils pratiques Entretien Essuyer votre téléphone avec un chiffon légèrement humidifié ou un chiffon antistatique. Ne jamais utiliser de chiffon sec : risque de charge statique ! Contact avec les liquides ! Si le poste mobile a été mis en contact avec un liquide, il ne faut en aucun cas le mettre en marche. Retirer tous les accumulateurs immédiatement. Laisser le liquide s'écouler, sécher toutes les parties avec un linge absorbant. Placer le mobile sans accumulateurs pendant au moins 72 heures dans un endroit chaud et sec.

Ensuite, dans la plupart des cas le mobile fonctionnera à nouveau. Tablette: Remédier aux défaillances Symptôme La déclaration ne s'est pas faite. Cause possible La batterie n'est pas suffisamment chargée. Remède Charger la batterie durant 16 heures (voir page 6). Débrancher le bloc-secteur puis le rebrancher (voir page 13).

Charger la batterie ou la remplacer (voir page 6). Appuyer durant 1 seconde sur la touche °. Aucun affichage. La batterie est vide. La protection du clavier est activée.

Aucune réaction lorsque vous appuyez sur les touches. 14 Symptôme Aucune liaison radio avec la base : le symbole / clignote ! Cause possible Le combiné se trouve hors de la zone de couverture de la base. Le combiné n'est pas déclaré. La base n'est pas active. Remède Se rapprocher de la base. Déclarer le combiné (voir page 13). Insérer le connecteur rond du cordon électrique dans la prise et placer le cordon dans la rainure (pour diminuer le tirage). Insérer le bloc-secteur dans la prise électrique. Portée La portée peut atteindre 50 m à l'intérieur et 300 m en champs libre. Le symbole de la base se met à clignoter lorsque vous quittez la zone de couverture de la base.
