Use the column on the left to browse for folders, and select specific files in the window on the right. Check-marking a folder in the left hand column will automatically mark all of the files and subfolders contained within that folder. 16 4.

Choose a Password for your file(s) and enter it again in the Confirm field. 5. You will then given the opportunity to remove the original file(s). If you click "Yes," only the encrypted version will remain. This will ensure nobody but you will be able to open the file or files that you have protected.

Decrypting Your Data 1. Select "Encrypt" from the Main Menu. 2. Locate your encrypted files or folders and click the checkboxes next to the items you want to unprotect. Encrypted files can be identified by the date stamp in ton.

Force-closing the software may result in irrecoverable data loss. 24 Helpful Tips Use Elite instead of "copy & paste" Whether you are backing up data for long-term storage or simply moving files to a different location, use Elite instead of the "copying and pasting." This will not only save time by making sure all files and subfolders are copied reliably, but will also give you the opportunity to execute the same procedure again in the future with easy scheduling options. Or, you can even use the One Touch auto-backup button to instantly backup specified files and folders (not available on all StoreJet models). Travel back in time with different restore points By default, Elite creates a new backup folder with a date stamp each time a backup is performed (whether manually or scheduled). This means that when you need to restore files, you can choose from different backup points to retrieve earlier or newer versions of your files. For novice users, this is the safest and way to ensure you can always go back to an earlier point in time, even if you deleted some files along the way. However, advanced users looking to save hard drive space should check out the Real-time Backup option. Real-time Backup saves time and hard drive space! Backup your data version-by-version. Novice users should start by performing a full backup without enabling any advanced options.

For more advanced users, we suggest trying the Real-time Backup option. @@@@You can use the same password for all of your Backup Tasks.

@@What's wrong? A: Make sure your StoreJet or JetFlash drive is properly connected to the computer. The Elite software only works in Windows 7, Vista, and XP. Q: didn't my scheduled backup take place? A: For scheduled backups to run properly, all hard drives, and all computers that contain hard drives associated with the scheduled Backup Task, must be connected and powered on during the time of the scheduled backup. Additionally, if the backup destination drive runs out of storage space, scheduled backups will not take place. Q: doesn't autoWhy doesn't One Touch auto-backup work? A: Did you mark the One Touch Backup field next to the Backup Task? If not, see here to learn how. This function only works with Transcend StoreJet brand drives that have a One Touch auto-backup button Q: An error message appears when restoring files A: This message usually means that you have moved, renamed or deleted some of the source or destination drives/folder/files associated with the Backup Task. Q: backedSome of the files specified in the Backup Task did not get backed-up A: Check to make sure the source file or folder is correct, and that no errors occurred during the backup procedure. 26 More Help If you cannot find the answer to your problem in this manual and are having difficulty with the Elite software, your Transcend StoreJet drive or JetFlash drive, Please visit our Tech Support website at [www.transcend.com.tw/support](http://www.transcend.com.tw/support)
