The image shows the cover of a user's guide for TRENDNET cameras. The background is black with a subtle wave pattern. In the top left, the text "User's Guide" is written in white. In the top right, the TRENDNET logo is displayed. In the center, two white TRENDNET TV-IP572PI cameras are shown from a three-quarter perspective. Below the cameras, the text "Megapixel PoE Internet Camera" and "Megapixel PoE Day/Night Internet Camera" is written in white. At the bottom, the model numbers "TV-IP572P/ TV-IP572PI" are listed. A red horizontal line is positioned above the model numbers.

with the included complimentary camera management software. Advanced features include adjustable motion detection recording areas, email alerts, scheduled recording sessions, H.

264/MPEG-4/MJPEG image compression, date-and-time overlays, a Micro-SD card slot for backup storage, two-way audio (speakers not included), an adjustable lens, and four times digital zoom. A wall/ceiling mounting kit is included and the camera's off white housing blends into most environments.

Product Overview TV-IP572P TV-IP572PI TV-IP572PI The Megapixel PoE Day/Night Internet Camera, model TV- IP572PI, transmits real-time Megapixel video over the Internet. Record crisp video in complete darkness for distances of up to 7.5 meters.

No need to install this camera near a power source, power and data are received through a single Ethernet cable using Power over Ethernet (PoE) technology (See TRENDnet PoE Switches and Injectors). Record 1280 x 800 Megapixel (WXGA) video at up to 30 frames per second (fps). Manage up to four video profiles to record HD video while streaming low resolution video to a compatible smart phone at the same time. Manage up to 32 TRENDnet cameras with the included complimentary camera management software. Advanced features include adjustable motion detection recording areas, email alerts, scheduled recording sessions, H.264/MPEG-4/MJPEG image compression, date-and-time overlays, a Micro-SD card slot for backup storage, two-way audio (speakers not included), an adjustable lens, and four times digital zoom. A wall/ceiling mounting kit is included and the camera's off white housing blends into most environments. Package Contents In addition to your camera, the package includes: Muti-Language Quick Installation Guide CD-ROM (Utility & User's Guide) Network cable (1.5m / 5ft) Power adapter (5V DC, 1.2A) If any package contents are missing or damaged, please contact the retail store, online retailer, or reseller/distributor that the item was purchased.

Adjustable Arm- Screw the arm through the metal stand hole. Use the adjustable screw to turn it up or down. Washer- Place the washer between the camera and the Plastic Bolt Plastic Bolt- Place the plastic bolt after the washer and screw the adjustable arm in place. © Copyright 2012 TRENDnet. All Rights Reserved. 4 TRENDnet User's Guide TV-IP572P / TV-IP572PI Installation Wired Connection 1. Connect the Ethernet Cable If you intend to use the network camera as a wired device, connect one end of the included Ethernet cable into the Ethernet port on the rear panel of the camera and connect the other end to an available port on your network. If you prefer to use the camera on a wireless network, see below for instructions on connecting the power adapter. Starting the Setup Wizard Insert the included CD-ROM into your CD/DVD drive. The Install Wizard program will run automatically.

Note: If the Install Wizard does not run, you may have autorun disabled on your machine. In this case, browse to the CD drive and run InstallWizard.exe to begin the installation wizard. Begin by selecting Setup Wizard and follow the on-screen steps to continue the installation. 2. Attach the Power Supply Attach the included power supply to the DC 5V 1.2A receptor on the rear panel of the camera and then connect it to a wall outlet or power strip. A blue LED will light up under the lens indicating that the camera has power. When the installation of the Setup Wizard is complete, run the Setup Wizard: 1. Click Start > Programs > TRENDnet > SetupWizard > SetupWizard.

The TRENDnet Setup Wizard appears. © Copyright 2012 TRENDnet. All Rights Reserved. 5 TRENDnet User's Guide 2. Connect an RJ-45 cable from a switch/router to the Ethernet port on the back of the camera and connect the AC power adapter to the camera. Click Next to proceed. 4. TV-IP572P / TV-IP572PI Login to your camera by entering the ID and Password. By default, both the ID and Password are set to admin. Click Next to continue.

3. From the list of cameras that appears, select the camera you wish to configure and click Next to continue. If your camera is not listed, ensure that it is connected to both power and the network and click to re-scan the network for your camera.

[You're reading an excerpt. Click here to read official TRENDNET TV-IP572PI user guide](http://yourpdfguides.com/dref/4299085)
<http://yourpdfguides.com/dref/4299085>

5. Enter a name for the camera in the Camera Name field. The name will be used to identify your camera on the network. Enter the correct time for the camera for the time zone it is in. If your camera is in the same time zone as the computer you are using, click the to the camera. Click Next to continue. icon to copy the local time © Copyright 2012 TRENDnet.

All Rights Reserved. 6 TRENDnet User's Guide 6. It is strongly recommended that you change your password to secure the camera from being accessed by others. Check the Change Password box and enter the new password in both password fields to confirm the new password. Click Next to continue. 8. TV-IP572P / TV-IP572PI A summary screen of the settings you have chosen appears. Click Next to continue. 7. Select a connection option: (example uses DHCP connection type) PPPoE: Select this option if your camera is directly connected to a DSL modem and your ISP requires a PPPoE authentication to the Internet.

DHCP: Select this option if your camera is connected to a router and DHCP is enabled. Fixed IP: Select this option if your camera is directly connected to a DSL modem and your ISP has supplied you with a fixed IP for your Internet connection. Select the radio button for your connection type and click Next to continue. 9. After the Setup Wizard configures the camera, the wizard starts to setup process.

© Copyright 2012 TRENDnet. All Rights Reserved. 7 TRENDnet User's Guide 10. When the Setup Wizard has finished, the configuration is complete and the following screen appears: TV-IP572P / TV-IP572PI You are now ready to use your camera. Click the IP address link or the link advanced configuration page.

button to access the camera's © Copyright 2012 TRENDnet. All Rights Reserved. 32 TRENDnet User's Guide TV-IP572P / TV-IP572PI to sunlight or halogen lights. Reposition the Network Camera into a more shaded area immediately as prolonged exposure to bright lights will damage the CMOS sensor. 5. The camera images are 'noisy' Often if the camera is in a low-light environment, the images can contain a lot of noise. Try enabling Night mode and see if that improves the image quality. Otherwise, try to use the camera in a location where there is a bit more light. 6.

The camera images are of poor quality. Make sure that your computer's display properties are set to at least 16-bit color. Using 16 or 256 colors on your computer will produce dithering artifacts in the image, making the image look as if it is of poor quality. Try also adjusting the brightness, contrast, saturation, light frequency and antiflicker controls on the Video Settings under the Configuration menu. You may also consider adjusting the resolution of the camera and the compression rate to improve the image. 7. Video can't be viewed through the web browser interface. ActiveX might be disabled. If you are viewing the images from Internet Explorer make sure ActiveX has been enabled in the Internet Options menu. You may also need to change the security settings on your browser to allow the ActiveX plugin to be installed.

Troubleshooting 1. The Power LED and Ethernet Activity LED do not light up. The power supply or camera might be faulty. Check that the connection to both the power source and the terminal on the back of the camera are secure and that you are using the provided power supply. If the camera is otherwise functioning correctly, the LEDs might have been disabled in the configuration.

See the section of this guide on Configuration of System settings. 2. The camera can't be accessed or access is slow There might be a problem with the network cable. To confirm that the cables are working, ping the address of a known device on the network. If the cabling is OK and your network is reachable, you should receive a reply similar to the following (.

..bytes = 32 time = 2 ms). Another possible problem may be that the network device such as a hub or switch utilized by the Network Camera is not functioning properly. Please confirm the power for the devices are well connected and functioning properly. 3. The camera can be accessed locally but not remotely This might be caused by a firewall. Check the Internet firewall with your system administrator. The firewall may need to have some settings changed in order for the Network Camera to be accessible outside your local LAN. For more information, please refer to the section about installing your camera behind a router.

Make sure that the Network Camera isn't conflicting with any Web server you may have running on your network. The default router setting might be a possible reason. Check that the configuration of the router settings allow the Network Camera to be accessed outside your local LAN. 4. White vertical lines appear on the image from the camera It could be that the CMOS sensor (a square panel situated behind the lens that measures the light signals and changes it into a digital format so your computer can present it into an image that you are familiar with) has become overloaded when it has been exposed to bright lights such as direct exposure © Copyright 2012 TRENDnet. All Rights Reserved. 33 TRENDnet User's Guide Federal Communication Commission Interference Statement This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications.

However, there is no guarantee that interference will not occur in a particular installation.

If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures: Reorient or relocate the receiving antenna. Increase the separation between the equipment and receiver. Connect the equipment into an outlet on a circuit different from that to which the receiver is connected. Consult the dealer or an experienced radio/TV technician for help. This device complies with Part 15 of the FCC Rules.

Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

FCC Caution: Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment. Europe EU Declaration of Conformity This device complies with the essential requirements of the R&TTE Directive 1999/5/EC. The following test methods have been applied in order to prove presumption of conformity with the essential requirements of the R&TTE Directive 1999/5/EC: EN 60950-1: 2006 +A11:2009 Safety of Information Technology Equipment EN 301 489-1 V1.8.

1: (2008-04) Electromagnetic compatibility and Radio Spectrum Matters (ERM); ElectroMagnetic Compatibility (EMC) standard for radio equipment and services; Part 1: Common technical requirements EN 301 489-17 V2.1.1 (2009-05) Electromagnetic compatibility and Radio spectrum Matters (ERM); ElectroMagnetic Compatibility (EMC) standard for radio equipment and services; Part 17: Specific conditions for 2,4 GHz wideband transmission systems © Copyright 2012 TRENDnet. All Rights Reserved. TV-IP572P / TV-IP572PI This device is a 2.4 GHz wideband transmission system (transceiver), intended for use in all EU member states and EFTA countries, except in France and Italy where restrictive use applies. In Italy the end-user should apply for a license at the national spectrum authorities in order to obtain authorization to use the device for setting up outdoor radio links and/or for supplying public access to telecommunications and/or network services. This device may not be used for setting up outdoor radio links in France and in some areas the RF output power may be limited to 10 mW EIRP in the frequency range of 2454 2483.5 MHz. For detailed information the end-user should contact the national spectrum authority in France.
