Manual abstract:

These moments become even more rewarding when you see your baby share and smile in the excitement of these important discoveries. That is why VTech® created the V.Smile Baby™ Infant Development System, a unique grow-with-me development system designed especially for the youngest learners aged 9 to 36 months. The learning grows as your baby grows! The V.Smile Baby™ Infant Development System combines a baby-friendly wireless activity panel, age-appropriate curriculum, entertaining images, and fun early learning activities into a unique experience for babies and parents to share together. The V.Smile Baby™ Infant Development System engages even the littlest learner with three, grow-with-me play modes: Play Time, Watch & Learn, and Learn & Explore. Babies go from playing with the activity panel, to watching educational videos complete with baby sign language, to directing their own play on the TV screen by choosing subjects they want to learn. As part of the V.Smile Baby™ Infant Development System, VTech® offers a library of Baby Smartridges based on popular children's environments that engage and invite your baby to play and discover.

Each Baby Smartridge features a variety of learning activities, baby sign language, 'grow-with-me' play, and lovable characters to guide your baby on a learning journey. "V.Smile Baby™ extends the classic activity center into an interactive, enriching educational experience for infants and toddlers especially when played with a loving adult," says Dr. Lise Eliot, neuroscientist and author of What's Going on in There? How the Brain and Mind Develop in the First Five Years of Life. @@@@Linda Acredolo and Dr.

Susan Goodwyn Why Sign Language for Babies? There's nothing more heart-wrenching than hearing a baby cry and not knowing what's wrong. Unfortunately, until they can talk, babies are literally "at a loss for words" when it comes to telling us what's going on and how best we can help. Now, thanks to our book Baby Signs and our research-based Baby Signs® Program, the world's leading sign language program for babies, children from 6 months to 3 years need no longer wait until they can talk to let us know what's on their minds. Instead, as Newsweek Magazine put it, they can learn simple "hand signals that let them communicate their joys and fears without tears." You're Already Doing It Signing is a very natural form of communication.

In fact, it's so natural that all parents teach their babies at least three signs-YES, NO, and BYEBYE-without even thinking about it. After two decades of research at the University of California, we now know that these three signs are just the tip of the iceberg. Babies are eager to learn many, many more signs to let us know what they need, what they see, what they feel, and even what they remember. What parents wouldn't want such a priceless window into their baby's mind? The Research Behind the Program But won't signing slow down learning to talk? The answer is a resounding "No!" In fact, just as crawling is a helpful precursor to walking, signing is a helpful precursor to talking. We've proven this to be the case with a longterm study funded by the National Institutes of Health. Far from hindering language development, babies in the Baby Signs® Program actually learned to talk sooner. We also discovered that this advantage continued over time in the form of higher IQs at age 8. Why Sign Language for Babies? 2 Wait No More! The Most Important Benefits Our research has also revealed even more important benefits for emotional development. Once your baby begins signing you'll see for yourself how the ability to use signs makes daily life with your baby easier and sweeter. Specifically, using signs.

*. . * decreases frustration, tantrums, and tears; * enables your baby to share his or her world with you; * strengthens the parent-infant bond; * helps you recognize just how smart your baby is; and Why Sign Language for Babies? 3 * promotes the development of self-confidence and self-esteem. A Gift to Last a Lifetime It's easy, it's fun, and it's a wonderful way to support your baby's development. By helping your baby communicate effectively so early in life, you are laying a foundation of love and learning that will last a lifetime. Dr. Linda Acredolo and Dr. Susan Goodwyn are internationally recognized scholars whose ground-breaking research demonstrating the positive effects of signing on infant development has sparked a world-wide movement. They are authors of the best-selling book Baby Signs: How to Talk With Your Baby Before Your Baby Can Talk and co-founders of the Baby Signs Institute through which they provide Sign, Say & Play™ classes, Parent Workshops, and high-quality products to make every family's signing experience a success.
