Manual abstract:

S.T. 3 Refit the fuse cover. @@If the mains plug contains a fuse, this should have a value of 5 Amp. @@Note: The severed plug must be disposed to avoid a possible shock hazard should it be inserted into a 13 Amp jack elsewhere. How to connect a plug The wires in the mains lead are coloured with the following code: blue = neutral (N), brown = live (L). •As these colours may not correspond with the colour markings identifying the terminals in your plug, proceed as follows: – Connect the blue wire to the terminal marked N or coloured black – Connect the brown wire to the terminal marked L or coloured red. – Do not connect either wire to the earth terminal in the plug, marked E (or e) or coloured green (or green and yellow). Before replacing the plug cover, make certain that the cord grip is clamped over the sheath of the lead not simply over the two wires. Copyright in the U.
